1.0 EXECUTIVE SUMMARY

This Hazardous Materials User Study is intended to help guide decision makers in assessing future land use decisions within the Warm Springs Study Area of Fremont, CA. The Study Area includes the Warm Springs Priority Development Area of industrially zoned land extending an approximate ½ mile radius from the future Warm Springs/South Fremont BART Station. Businesses that operate in the Study Area store, use, generate, and transport hazardous materials. Hazardous materials may exhibit toxic, flammable, and explosive properties which pose a risk to the health, safety, and welfare of people and the environment. This Study uses federal and state established modeling protocols to analyze hazardous risk posed to sensitive receptors within the Study Area.

This Study has identified current businesses and public/private utilities which store, use, generate or transport hazardous materials within the Study Area. Public records were reviewed to identify chemicals of concern and quantities. In cooperation with the City of Fremont staff, eleven sources and corresponding hazardous materials were selected to conduct quantitative risk modeling. Modeling has shown that there is potential for off-site consequences during the worst case release scenario (no containment) of hazardous materials from several businesses and pipelines within the Study Area. Some properties in the Study Area could be affected by multiple hazardous materials users. Therefore, there is hazardous risk to sensitive receptors sited in future residential, commercial, or other non-industrial zones within the Study Area. Mitigation techniques, which could reduce the severity of consequences during a release, have been identified for stationary sources. Specifically, the mitigations discussed include:

1. Setback Distance – Increasing the distance between the sensitive receptors and the potential hazard.
2. Blast Walls – Constructing a flame and blast resistant wall between the sensitive receptors and the potential hazard.
3. Earthen Berms – Constructing earthen berms between the sensitive receptors and the potential hazard.
4. Building Orientation – Orientating the buildings such that the exposed surface area within direct line of site facing a potential over pressurization front is minimized.
5. Building Ventilation System Shutdown – Minimizing the exchange rate between outside and indoor air preventing exposure to toxic gases.
6. Building Materials – Using fire resistant and blast resistant materials in the building construction.

The probability of a pipeline release could be mitigated by requesting operators to conduct more frequent and rigorous safety testing, installing better signage, providing right of way encroachment protection, and by reducing pipeline operating pressure. The severity of consequences given a pipeline release could be mitigated by the same mitigation measures identified for stationary sources as well as by using mitigating site design, eliminating ignition sources, installing leak monitoring and alarm systems, and by installing automatic shut-off valves.

2.0 INTRODUCTION

2.1 Purpose

The City of Fremont (City) retained TRC Solutions, Inc. (TRC) to conduct a Hazardous Materials User Study (Study) related to land use planning for the future Warm Springs/South Fremont BART Station (Proposed Station) and the Warm Springs Priority Development Area (Study Area) of industrially zoned land extending an approximate ½ mile radius from the Proposed Station. The purpose of this assessment is to analyze potential constraints and impacts to siting new sensitive receptors in an existing industrial area from the presence of hazardous materials being used and/or transported. The study is meant to advise future land use decisions within the Study Area as part of City of Fremont efforts to prepare a community plan.

2.2 Scope of Services

The scope of this study included the following:

- 1) A reconnaissance of accessible sites, business and areas within the Study Area;
- 2) Interviews with pertinent City staff;
- 3) Review of applicable hazardous material storage and use documents (e.g., hazardous materials business plans, risk management plans, correspondence, permits, checklists, etc.) to screen for major hazardous material users in/around the Study Area (up to 40 business);
- 4) Review of historical hazardous material release documents;
- 5) Identification of hazardous materials of concern and quantities at identified businesses;
- 6) Estimation of potential risks calculated using the Environmental Protection Agencies (EPA) Risk Management Program Guidance for Offsite Consequence Analysis (March, 2009), California Department of Education (CDE) Pipeline Risk Protocol (February, 2007) , and the Final California Accidental Release Prevention (CalARP) Program Regulations (June, 2004) for any hazardous materials identified as a concern within the Study Area (up to ten [10] businesses);
- 7) Summary of mitigation measures to reduce any identified offsite consequences to future sensitive receptors within the Study Area;
- 8) A discussion related to feasibility of relocating hazardous materials such that risk to human health and safety within the Study Area is lessened;
- 9) Completion of a final report documenting methodologies, findings, conclusions and recommendations; prepared and signed by a Certified Industrial Hygienist

3.0 CERTIFICATION

This Hazardous Materials User Study completed for the Warm Springs Priority Development Area in the City of Fremont, California has been reviewed by a Certified Industrial Hygienist (CIH).

Andre Barton Ashley Jr., CIH, CSP

4.0 BACKGROUND

Study Area Setting

Fremont, California is located in south western Alameda County which lies in the southeast section of the San Francisco Bay Area. It is bordered on the west by the San Francisco Bay and on the east by the East Bay Hills. Fremont is generally flat with a slight increase in elevation moving eastward until reaching the foothills. It is part of the San Francisco Bay Area Air Basin (SFBAAB). The Bay Area Air Quality Management District (BAAQMD) is responsible for monitoring air quality and meteorological conditions within this basin. The local Certified Unified Program Agency (CUPA) which is responsible for coordinating the implementation of California's hazardous materials regulatory programs is the City of Fremont Fire Department.

The Study Area includes approximately 800 acres of land that is mix of built out industrial property and vacant land. The Proposed Station site is vacant and is just south of South Grimmer Boulevard, west of Warm Springs Boulevard along the Union Pacific Rail Corridor (which the BART transit line will also use as it's right of way). The station site is zoned as a public facility while the Study Area consists of a mix of general industrial and technological industrial zoned areas. See Figure 1 on the next page for a Study Area boundary map. The BART Station construction will begin in 2012 with a planned opening in 2015 as part of the Warm Springs BART extension.

Meteorological Conditions

During the summer, the weather in Fremont is typical of weather on the California west coast. The consistent seasonal formation of a semi-permanent, subtropical high-pressure cell over the north eastern Pacific Ocean blocks storms and causes negligible precipitation. During the winter, the Pacific High shifts southward and exposes the Bay Area to occasional rainstorms. The vast majority of the precipitation occurs during the winter months.

Winds during the summer months are steady and predominantly from the northwest. In the winter months, winds alternate from periods of storminess with strong winds to periods of stagnation. During periods of storminess, winds are predominantly from the west and northwest while during periods of stagnation, light and variable winds are expected. The average annual wind speed in Fremont is 6 miles per hour (mph) from the northwest (BAAQMD).

4.1 Historical Conditions

An Environmental Data Resources, Inc. (EDR) report was ordered for the Proposed Station as a central location in the Study Area. The EDR includes a Radius Map Report which satisfies American Society for Testing and Materials (ASTM) E1527-05 and the EPA's All Appropriate Inquiry Rule. The report was used to identify sites in the area which show up in government environmental databases, which is a typical approach when conducting Phase I and II site assessments. Approximately 35 historical sites within the Study Area were identified in the Radius Report. The EDR Summary Radius Map Report is available in Appendix D.

Figure 1: Study Area Boundary and Hazardous Materials Users of Interest

4.2 Identification of Hazardous Sources

Potential hazardous materials users in the Study Area were identified during a thorough site reconnaissance by TRC staff. Correspondence between City staff and TRC staff was crucial in ensuring a complete inventory of hazardous materials users in the Study Area. Business plans and Risk Management Plans (RMPs) were then reviewed at the Fremont Fire Department in order to identify types and quantities of hazardous materials used, stored, or generated by businesses in the Study Area.

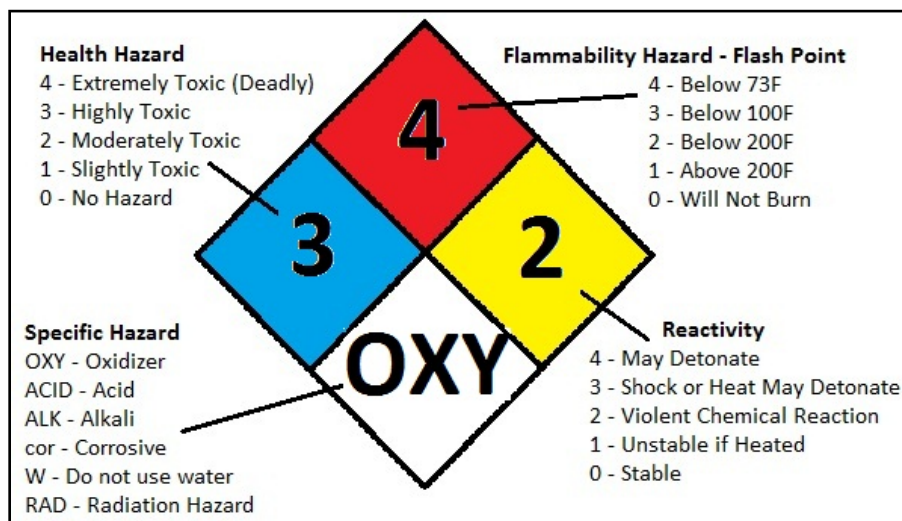

4.2.1 Study Area Reconnaissance

On Monday, January 16, 2012, a reconnaissance of the Study Area was conducted in order to identify potential sources of hazardous materials. Visual cues to hazardous materials such as liquid storage tanks, pipeline markers and transmission lines were noted and photographs were taken. Three categories of potential sources of hazardous materials were found to exist: stationary sources, mobile sources, and pipelines.

Stationary Sources

During the reconnaissance, businesses displaying National Fire Protection Association (NFPA) 704 placard were identified. According to The California Emergency Management Agency Business Plan/ Emergency Planning and Community Right-to-Know Act (EPCRA) 312 program (established in 1986), businesses that handle hazardous materials in quantities greater than 55 gallons of liquids, 200 cubic feet of gases, and 500 pounds of solids, or extremely hazardous materials above the threshold planning quantities (40 Code of Federal Regulations (CFR), Part 355, Appendix A and B) must submit a Hazardous Material Business Plan (HMBP) to a Certified Unified Program Agency (CUPA). The requirements also mandate said businesses to display NFPA placards which provide information on the types of hazardous materials present. NFPA placards are color coded based on the type (health, flammability, reactivity, and special) and numerical, on a scale of 1 through 4, based on the severity. Figure 2 illustrates an example of a NFPA placard and an explanation of the numerical scale for each category.

Figure 2: NFPA 704 Placard Example and Explanation

Approximately 35 stationary source businesses were identified as sources of hazardous materials. Several sites were noted as having large above ground storage tanks containing both flammable and cryogenic hazards. Figure 3 shows a large liquid hydrogen storage tank located example from within the Study Area. Businesses without NFPA placards, and thus no presumed hazardous chemicals over the thresholds, were not identified for this assessment. The list of businesses displaying placards was reviewed with City staff in order to verify that there were not any omissions of businesses with significant hazardous materials.

Figure 3: Example of Liquid Hydrogen Storage Tank in Study Area

Mobile Sources

The Union Pacific rail corridor abuts the future BART station's western edge and travels north-south through the Study Area. The rail corridor runs approximately through the center of the Study Area. Along the rail corridor, short rail spurs branch off of the main corridor and into adjacent industrial property to the west. Starting from the southernmost point of the study area and heading north, this first occurs in the Tesla Motors electric vehicle manufacturing plant. The next spur branches off adjacent to the Proposed Station and ends at the intersection of Lopes Court and South Grimmer Boulevard. A third spur exists just north of South Grimmer Boulevard and ending in a truck-rail handling facility (Snoboy) east of Fremont Boulevard. During the reconnaissance, the storage of liquid storing rail cars was observed in this vicinity. Figure 4, taken during the reconnaissance, displays various liquid rail tanker cars parked in the truck rail facility. These rail cars would pass through the Study Area to be loaded or unloaded at Snoboy. Figure 4 also depicts above ground liquid storage tanks and gas cylinders which may represent stationary source hazards.

Figure 4: View of Liquid Rail Tanker Car Storage

Transmission Lines / Pipelines

During the reconnaissance, pipeline markers designating the presence of underground liquid fuel pipelines were noted. Using the National Pipeline Mapping System (NPMS) website, it became clear that along the Union Pacific railway that abuts the Proposed Station's western edge run two underground liquid petroleum product pipelines, operated by Chevron Pipeline Company (CPL) and Kinder Morgan Energy Partners (KMEP). NPMS also revealed that the CPL pipeline takes a 90 degree turn just south of South Grimmer Boulevard and continues east along the Proposed Station's northern border. Inquiries were sent to CPL and KMEP via email on January 25, 2012 in order to review pipeline parameters such as typical operating pressure, age, break valve locations (automatic or manual), leak detection time, and diameter. These parameters are beneficial in order to complete a quantitative pipeline risk assessment in accordance with California State Fire Marshall guidelines.

In addition, during the reconnaissance, Pacific Gas and Electric (PG&E) markers indicated the presence of "Buried Gas Facilities" along the Union Pacific Rail corridor. NPMS indicated that PG&E operates two pipelines within a ½ mile of the proposed Site boundary. These are service lines which "dead-end" in Tesla Motors facility and in a vacant lot just north of Mission Boulevard and east of I-880. The more northern of the two service lines is within the Study Area. PG&E was contacted on January 25, 2012 to obtain pipeline parameters in the event that a quantitative risk assessment is necessary. See Appendix E to see all correspondence with pipeline operators. Figure 1 contains an overview map exhibiting the locations of pipelines of interest within the Study Area.

4.2.2 Records Review

Following the Study Area reconnaissance, the City of Fremont CUPA was contacted to review site specific records on file. Businesses with NFPA placards on display were selected. Initially, upwards of 35 sites were identified for records review. The original list was narrowed to 25 businesses after consultation with City of Fremont staff. Appendix E contains the correspondence which led to the selection of sites for records review.

During the review, a business's permit was first reviewed to see what CUPA Programs the facility participated in. All businesses were found to participate in the HMBP program and copies were made of these documents. Some businesses were found to participate in the California Accidental Release Plan (CalARP) and copies were made of these documents when applicable. See Appendix A for copies of site specific permits, HMBPs, and CalARP Plans.

HMBP Review

In the State of California, HMBPs must be submitted for any business which generates hazardous waste or uses hazardous materials over threshold quantities. HMBP's contain Hazardous Material Inventory Statement's (HMIS) which contain lists of each hazardous material a business stores over the course of a year. Properties and storage details of those materials are also included in the HMIS.

During the HMBP review, it was found that businesses within the Study Area use many materials which have hazardous properties. However, most of the materials identified in a business' HMIS are in small quantities or do not have an NFPA hazard rating greater than 2 for the categories of health, fire, or reactivity. Because so many materials existed in the HMIS, which pose insignificant hazardous risk to sensitive receptors given their quantity and hazard rating, it was necessary to develop a prioritized list consisting of those hazardous materials posing more significant threats. This list is provided in Appendix B.

Hazardous materials which did not have a hazard rating greater than 2 for any category were generally not selected for the prioritized list. For materials that were gases stored under pressure, information from the HMBP and specifically the largest maximum amount stored in a single container at any time (reported as ft³ at Standard Temperature and Pressure) was recorded. For businesses with many hazardous gases stored under pressure, those with highest NFPA ratings and quantities were added to the prioritized list. For liquids, chemicals with a hazard ranking over 3 for any of the three categories were typically recorded but only if they were stored in quantities greater than 55 gallons. Unique or significant hazards with NFPA ratings of 4, such as hexane stored at Thermo Fisher at 44660 Osgood Rd., were recorded even if stored in small quantities.

CalARP Program Review

The CalARP Program, codified in the California Code of Regulations (CCR) Title 19, Chapter 4.5, includes the federal Accidental Release Prevention Program [Title 40, Code of Federal Regulations (CFR) Part 68] and certain additions specific to the state pursuant to Article 2, Chapter 6.95, of the Health and Safety Code (HSC). The local CUPA may require a stationary source business to submit a Risk Management Plan (RMP) if they have more than a threshold quantity of a regulated material. Regulated materials are the toxic or flammable materials found in Section 112(r) of the federal Clean Air Act (CAA) and those pursuant to Section 25532(g)(2) and 25543.3 of the California HSC.

During records review at the City of Fremont Fire Department, it was found that two stationary sources identified as potential hazardous sources during the site reconnaissance participate in the CalARP program and have RMP's. These sources were Glacier Ice Company at 43960 Fremont Boulevard and Global Plating, Inc. at 44620 Grimmer Boulevard. CalARP requires that RMP's contain Offsite Consequence Analysis (OCA) in which one worst-case release scenario is investigated for each regulated

material present over the threshold quantity. Certain businesses are also required to investigate alternative release scenarios (ARS).

A summary of OCA scenarios found during the records review and distances to pertinent toxic or flammable endpoints are included in the risk assessment section of this report (Section 5).

5.0 RISK ASSESSMENT

A risk assessment was conducted in order to show whether businesses in and surrounding the Study Area use hazardous materials which would expose individuals to a health and safety risk during a worst-case release scenario (WCRS) or alternative release scenario (ARS). Risk modeling was conducted using standardized state and federal assumptions for off-site consequence. Distance to off-site consequence is based on federal or state defined flammable and toxic Levels of Concern (LOC)'s or "endpoints". A LOC or "endpoint" is a threshold value of a hazard (toxicity, flammability, thermal radiation, or overpressure) above which a threat to people or property may exist. For sites found with existing RMP's due to having regulated materials over threshold quantities, the existing offsite consequence analysis is incorporated into this report.

5.1 Selection of Sites

The professional judgment of TRC staff and City of Fremont staff was utilized in order to further narrow down the 25 sites chosen for HMBP review to a list of the most likely problematic hazardous materials and storage locations. Seven (7) businesses, representing ten (10) release scenarios of various discrete hazardous materials of concern were selected to conduct further quantitative risk assessments based on worst-case hypothetical chemical releases. Table 1 presents the businesses and corresponding hazardous material of concern.

Table 1: Businesses and Corresponding Hazardous Materials Selected for Risk Assessment

Facility Name	Hazardous Material	RMP? (Y/N)
Global Plating	Nitric Acid	Y
Global Plating	Hydrocyanic Acid (HCN) Gas	Y
Glacier Ice Company	Ammonia (anhydrous)	Y
West Coast Quartz	Hydrogen 5.5.2	N
Hayward Quartz	Hydrogen	N
Truck-Rail Handling INC.	Methanol	N
Western Digital	Chlorine	N
Western Digital	Ammonia (anhydrous)	N
Western Digital	Silane	N
7UP Bottling Co.	Propane	N

Additionally, releases from a PG&E natural gas pipeline and a Chevron Pipe Line Company (CPL) were considered in this analysis. Table 2 contains the name of the pipeline and the associated hazardous material of concern. The CPL was used as a surrogate for the KMEP pipeline since the hazards posed by each are so similar.

Table 2: Pipelines and Corresponding Hazardous Material Selected for Risk Assessment

Pipeline Operator	Chemical of Concern
PG&E	Natural Gas – Modeled as Methane
CPL	Gasoline – Modeled as Pentane and Octane

5.2 Risk Modeling Methodology and Assumptions

Modeling was conducted using Areal Location of Hazardous Atmospheres model (ALOHA) version 5.4.2 developed by the Office of Emergency Management of the EPA and the Emergency Response Division of National Oceanic and Atmospheric Administration (NOAA). Modeling was performed assuming WCRS and alternative release scenarios projected to result in high offsite consequences.

While the WCRS models presented in this assessment account for specific chemicals, quantities, and distances that is representative of actual conditions surrounding the Site location, they do not take into account best management practices (BMPs) and/or regulatory requirements that are designed to safeguard the extent of a worst-case release scenario. An example of these regulations is California Code of Regulations (CCR), Title 24, also referred to as the California Building Standards Code which establishes building requirements for the use and storage of hazardous materials. Another example is 49 CFR 195 which concerns hazardous liquid pipeline safety laws.

CCR Title 24 Chapter 34 establishes regulations for the storage of flammable in combustible liquids. Section 3404.2.2 mandates that tank cars and tank vehicles shall not be used as storage tanks which means a spill from the truck/rail handling facility would have to occur during transportation or bulk transfer. Section 3406.5.1.18 mandates that transfer operations shall be surrounded by a noncombustible fence not less than 5 feet in height and Section 3406.5.1.17 requires all transfer operations be monitored by an approved monitoring system or attendant who is present at all times. These are just a few examples of regulations which make a full quantity release from the truck/rail handling facility extremely unlikely.

CCR Title 24 Chapter 30 establishes regulations for the storage, use, and handling of compressed gases in compressed gas containers and cylinders. The regulation safeguards releases of compressed gases due to seismic activity, physical disturbances, and security risks while also setting forth design requirements for cylinders and valves which also mitigate the likelihood of releases.

CCR Title 24 Chapter 37 establishes storage and use requirements for toxic gas cylinders. Per Section 3704.2.2 toxic gas cylinders must be located within gas cabinets, exhausted enclosures, and gas rooms ventilated to treatment system capable of diluting, adsorbing, absorbing, containing, neutralizing, burning the largest single vessel of compressed gas. These treatment systems also must be designed to reduce the maximum allowable discharge concentrations of the gas to one-half the Immediately Dangerous to Life or Health (IDLH) threshold at the point of discharge to the atmosphere. The regulation also mandates automatic shut off valves and gas detection systems connected to emergency power.

5.2.1 Endpoints

CalARP Section 2750.2 sets forth endpoints for regulated toxic and flammable materials. These endpoints are defined as the point where serious injuries from short-term exposure to a regulated substance will no longer occur. The risk modeling conducted in this report determines distances to the CalARP defined toxic or flammable endpoints.

Toxic endpoints vary by chemical and are available in CalARP Section 2770.5 in Tables 1 and 3. Flammable endpoints set forth in the regulation are defined in Table 3 below.

Table 3: Flammable Endpoints

Type of Scenario	Endpoint
Explosion	Overpressure of 1 psi
Radiant heat/exposure time	5 kw/m ² for 40 seconds
Lower Flammability Limit	As provided in NFPA documents or other generally recognized sources

CalARP defined toxic and flammable endpoints are the standard exposure thresholds for hazardous risk modeling found in RMP's. However, there are various other established exposure , thresholds for hazardous materials.

For thermal radiation exposure, 2 kilowatts per square meter is known to cause pain within 60 seconds, 5 kilowatts per square meter is known to cause second degree burns after 60 seconds, and 10 kilowatts per square meter is potentially lethal after 60 seconds. For overpressure exposure, 1 pound per square inch is known to cause partial demolition of houses, 5 pounds per square inch is known to cause nearly complete destruction of houses, and 10 pounds per square inch is known to destroy buildings.

Many established thresholds for public exposure to toxic materials exist. One of the most common of these thresholds is called the Immediately Dangerous to Life and Health (IDLH) limits. IDLH's are workplace exposure limits that are used primarily for making decisions regarding respirator use. The National Institute of Occupational Safety and Health (NIOSH) defines an IDLH condition as a situation "that poses a threat of exposure to airborne contaminants when that exposure is likely to cause death or immediate delayed permanent adverse health effects or prevent escape from such an environment." In the 1980's, before public exposure guidelines were available for most common chemicals, IDLH's were used. In general, IDLH values are higher than the toxic endpoints defined by CalARP meaning that it represents a more severe hazard. Thus, the distance to an IDLH will be shorter than that to a CalARP toxic endpoint.

5.2.2 Worst-Case Release Scenario

Worst-case release scenario modeling was conducted in accordance to guidelines suggested by the following protocols:

- California Code of Regulations, Title 19, Division 2, Chapter 4.5 – Final Regulations for California Accidental Release (CalARP) Program, June 2004.
- EPA's Risk Management Plan Guidance for Offsite Consequence Analysis, March 2009.
- California Department of Education, Guidance Protocol for School Site Pipeline Risk Analysis, February 2007.

For the purposes of this study, reasonable worst-case release scenarios (WCRS) occurring from manufacturing business were assumed to take place in the absence of active or passive mitigation. Consistent with CalARP Section 2750.3(h) passive mitigation can be considered during WCRS modeling. However, site specific passive mitigation descriptions were not available in the CUPA programs documentation. Therefore, modeling was carried out as if the WCRS occurred outdoors and in the absence of any passive mitigation. This would generally be characterized as a release that occurs during transport or exchange of materials or tanks on site, not as part of the industrial processes use itself. In the case of a pipeline source it would be from an accidental disturbance of the pipeline causing a release.

CalARP Section 2750.2 also defines general WCRS parameters for meteorological conditions, height of release, surface roughness, and temperature of released material. CalARP also requires that the model used accounts for the density of gases. These parameters are provided in Table 4.

Table 4: General WCRS Parameters

Parameter	Value
Wind Speed	1.5 m/s
Atmospheric Stability Class	F
Ambient Air Temperatures	25°C or 77°F
Height of Release	0 feet
Surface Roughness	“Urban”
Dense or Neutrally Buoyant Gases	Models used for dispersion analysis must account for gas density.
Temperature of Released Material	Liquids other than gases liquefied by refrigeration only shall be considered to be released at the highest daily maximum temperature.

m/s = meters per second

°C = degrees Celcius

°F = degrees Fahrenheit

CalARP Section 2750.3(b) defines the worst-case release quantity. The WCRS for chemicals modeled in this risk assessment were assumed to occur from the greatest amount held in a single vessel as recorded in the HMIS. The analysis does not consider releases from multiple vessels or cumulative effects of multiple releases. As stated in the EPA’s RMP Guidance, releases occurring from multiple vessels at the same time are highly unlikely.

CalARP Section 2750.3(c), (d), (e), and (f) defines WCRS for toxic gases, toxic liquids, flammable gases, and flammable liquids, respectively. These hazard specific assumptions are provided in Table 5.

Table 5: Hazard Specific WCRS Assumptions

Type of Hazard	Parameter	Value
Toxic Gases	Type of Release	Full quantity released to air over a span of 10 minutes
	Endpoint Modeled	Toxic endpoint
Toxic Liquids	Type of Release	Full quantity instantaneously forms an evaporating pool
	Spill Depth	1 centimeter or .394 inches
	Surface Type	Flat, non-absorbing
	Release Rate to Air	Evaporation rate from pool
Flammable Gases	Endpoint Modeled	Toxic endpoint
	Type of Release	Full quantity released to air over a span of 10 minutes
	Ignition	Detonation of vapor cloud at 10 minutes as soon as full quantity has been released
Flammable Liquids	Endpoint Modeled	Overpressure of 1.0 pounds per square inch
	Type of Release	Full quantity instantaneously forms an evaporating pool or burning pool
	Spill Depth	1 centimeter or .394 inches
	Surface Type	Flat, non-absorbing
Flammable Liquids	Endpoint Modeled	Detonation of vapor cloud at 10 minutes for evaporating pools or radiant heat of 5 kilowatts per square meter for pool fires

Quantities released from liquid petroleum product pipelines were assumed to occur from a full rupture sized hole from the pipe and occurring for 15 minutes. ALOHA provides a tool to calculate the quantity released during this situation. After determining the quantity released using ALOHA, the WCRS was modeled using assumptions for flammable liquids. Similarly, the quantity released from natural gas pipelines was assumed to be that released after 15 minutes following a full rupture. Full ruptures are defined as the area of the rupture equaling the cross sectional area of the pipeline.

5.2.3 Alternative Release Scenario (ARS)

Section 2750.4 of the CalARP regulations define alternative release scenarios as those that are more likely to occur. Alternative release scenarios account for passive mitigation, such as containment areas which reduce pool size, and active mitigation, such as emergency shut-off valves and water/chemical sprays. Also, EPA’s RMP Guidance suggests using class D stability and a wind speed of 3 m/s for alternative release scenarios whereas worst-case release scenarios assume F stability and wind speeds of 1.5 m/s.

5.3 Risk Assessment Results Summary

RMP Modeling Results

Site specific RMP’s were reviewed for offsite consequence analysis (OCA) modeling for any facility that contains regulated materials in excess of threshold quantities. A summary of the results are given in Table 6.

Table 6: RMP Review OCA Modeling Results

Site ID*	Facility	Hazard	Threat Modeled / Endpoint	Release Scenario	Distance to Endpoint (feet)	Suggested Mitigation*
3	Global Plating	Nitric Acid	Toxic Endpoint / 0.026 mg/L	WCRS	1584	None
				ARS	528	None
		HCN Gas	Toxic Endpoint / 0.011 mg/L	WCRS	2112	None
				ARS	528	None

*Refer to base Map in Figure 1

Worst Case Release Scenario Modeling

Worst Case Release Scenario Modeling was performed using the parameters defined in Section 5.2 of this document. Modeling also incorporated the assumptions found in Section 5.2 and the chemicals of concern and quantities as identified in each facilities HMBP. Table 7 summarizes modeling results for selected chemicals of concern at stationary source businesses. Numbered mitigation values are presented corresponding to the mitigation measures introduced in Section 6.1.

Table 7: WCRS Modeling Results Summary

Site Identification*	Facility	Hazard	Threat Modeled / Endpoint	Threat Zone (feet)	Suggested Mitigation**
6	West Coast Quartz	Liquid Hydrogen	Blast Overpressure / 1 psi	2232	1,2,3,4,6
4	Hayward Quartz	Liquid Hydrogen	Blast Overpressure / 1 psi	2169	1,2,3,4,6
5	Truck-Rail Handling Inc.	Methanol	Blast Overpressure / 1 psi	No Explosion	NA
			Thermal Radiation / 5 kW/m ²	396	1,2,3,4,6
8	Western Digital	Chlorine gas	Toxic Endpoint / 0.0087 mg/L	2856	1, 5
7	Western Digital	Ammonia	Toxic Endpoint / 0.14 mg/L	219	1, 5
8	Western Digital	Silane gas	Blast Overpressure / 1 psi		NA
1	7UP Bottling Co.	Liquid Propane	Blast Overpressure / 1 psi	537	1,2,3,4,6

psi = pounds per square inch

kW/m² = kilowatt per meter squared

5.4 Existing RMP Offsite Consequence Analysis

5.4.1 Global Plating—Nitric Acid

As reported in HMBP (See Appendix A), Global Plating Inc. at 44620 South Grimmer Boulevard has a 500 gallon above ground liquid storage tank in the process area of the facility which contains 67% nitric acid solution. It is assumed that at maximum conditions, Global Plating stores the tank full with 10,403 lbs.

Properties and Hazards of Nitric Acid

Nitric Acid is a colorless to yellow or red liquid that sometimes fumes reddish brown vapors (nitrogen dioxide). It has a suffocating odor. Nitric Acid is non-combustible, but contact with metals may evolve flammable hydrogen gas. It is toxic such that inhalation, ingestion or contact with vapors, dusts or material may cause severe injury, burns or death. Reaction with water will release toxic and/or corrosive gases. It is also a strong oxidation agent.

Table 9: Properties and LOCs of Nitric Acid

Molecular Formula	HNO ₃
CAS#	7697-37-2
NFPA 704	
Boiling Point (°F)	187
Specific Gravity	1.408

°F = Fahrenheit

ppm = parts per million

mg/L = milligram per liter

WCRS Modeling Results

The worst-case release scenario analysis for a nitric acid release from Global Plating Inc. was previously modeled as part of a Risk Management Plan prepared by Chemical Solutions Inc. in March of 2007. The worst-case scenario is the release of 500 gallons of nitric acid from the nitric acid storage tank in the process area of the facility. A highest daily maximum temperature of 95 degrees Fahrenheit and relative humidity of 50 percent was assumed to calculate the volatilization rate. The duration of the release was assumed to be 10 minutes.

Using the USEPA worksheet for Worst-Case Analysis for a Toxic Liquid it was found that the quantity of nitric acid in the 67% mixture is 3,911 lbs. The released material would spill onto the bermed process area of the facility, with 13.3 pounds of nitric acid being released offsite. The Risk Management Plan including the WCRS analysis is available in Appendix A. Results are summarized below in Table 10.

Table 10: Global Plating Nitric Acid WCRS Modeling Results

Parameter	Value
Material	Nitric Acid
Total Released	13.33 lbs
Distance to Endpoint	1584 feet

mg/L = milligram per liter

5.4.1.1 Global Plating – Nitric Acid Alternative Release Scenario

The Global Plating RMP also investigates an alternative release scenario where 55 gallons of 67% nitric acid is released from a storage drum. In this scenario, the solution forms a one-centimeter deep 212 square foot pool. Active and passive mitigation were not considered in this scenario. EPA’s RMP Guidance was used to complete the modeling using assumptions presented for alternative release scenarios. Results are summarized below in Table 11.

Table 11: Global Plating Nitric Acid ARS Modeling Results

Parameter	Value
Material	Nitric Acid
Release Rate Inside	0.92 pounds per minute
Release Rate Outside	0.05 pounds per minute
Release Duration	10 minutes
Quantity Released	0.5 pounds
Toxic Endpoint	0.026 mg/L
Distance to Endpoint	528 feet

mg/L = milligram per liter

5.4.2 Global Plating – Hydrocyanic Acid (HCN) Gas

As reported in the site specific HMBP (See Appendix A) potassium cyanide (KCN) is also stored on the Global Plating Site in a 190 gallon silver plating bath tank. It is assumed that at worst-case conditions, Global Plating stores 768 lbs of KCN on-site. Global Plating also uses hydrochloric, nitric, and sulfuric acid at the facility. The most significant risk resulting from a KCN release event is the generation of toxic hydrocyanic acid (HCN) gas from the mixing of KCN and excess acid. This could occur during a seismic event which may cause multiple storage vessels to fail. Therefore the worst-case scenario assumes the entire release reacts to form HCN gas.

Properties and Hazards of Hydrocyanic Acid (HCN)

Table 12: Properties and LOCs of HCN Gas

°F = Fahrenheit

mg/m³ = milligram per cubic meter

mg/L = milligram per liter

Global Plating Inc. HCN Gas WCRS Modeling Results

The worst-case potassium cyanide release scenario is the release of 190 gallons (209 pounds) from the rupture of the silver plating bath. It is assumed that all the potassium cyanide reacts with excess acid to form 86 pounds of HCN gas inside the building. It is conservatively assumed the wind speed during the release is 1.5 meters per second, the atmospheric stability is class F, the ambient temperature is 25 degrees centigrade, and the relative humidity is 50%. The gas was assumed to be released over a 10 minute period.

Using the USEPA worksheet for worst-case analysis for a toxic gas it was found that one pound of potassium cyanide will generate 0.41 pounds of HCN, therefore in 10 minutes, 209 pounds of potassium cyanide will generate 86 pounds of HCN or 8.6 pounds per minute. The rate is corrected for an EPA enclosure factor resulting in a reduced release rate of 4.7 pounds per minute. The results are presented below in Table 13.

Table 13: Global Plating HCN WCRS Modeling Results

Parameter	Value
Material	HCN Gas
Release Rate Inside	8.6 pounds per minute
Release Rate Outside	4.7 pounds per minute
Release Duration	10 minutes
Quantity Released	47 pounds
Distance to Toxic Endpoint	2112 feet

mg/L = milligram per liter

5.4.2.1 Global Plating – Hydrocyanic Acid Alternative Release Scenario

Global Plating also analyzes an alternative release scenario of 110 pounds of KCN from a storage drum. In this scenario, it is assumed that only one third of the spilled solution reacts with excess acid. The release uses the alternative release scenario assumptions of a wind speed of 3.0 meters per second and atmospheric stability class “D”. Results are provided in Table 14 below.

Table 14: Global Plating HCN ARS Modeling Results

Parameter	Value
Material	HCN Gas
Release Rate Inside	1.5 pounds per minute
Release Rate Outside	1.5 pounds per minute
Release Duration	10 minutes
Quantity Released	15 pounds
Toxic Endpoint	0.011 mg/L
Distance to Endpoint	528 feet

5.4.3 Glacier Ice Company – Ammonia (anhydrous)

As reported in HMBP (See Appendix A), Glacier Ice Company at 43960 Fremont Boulevard has a 15,000 pound above ground anhydrous ammonia storage tank. It is assumed that the maximum amount of ammonia stored onsite is 14,200 lbs.

Properties and Hazards of Ammonia (anhydrous)

Ammonia is a clear, colorless gas with a strong odor. It is typically shipped under pressure in liquid form. Contact with the unconfined liquid can cause frostbite. The gas is not considered flammable but in high concentrations and a strong ignition source it can burn. The gas is lighter than air, but vapors from an initial leak will hug the ground. Inhalation of the poisonous vapors can have fatal health effects.

Ammonia is caustic and can have violent reactions with acids and numerous other compounds that include, fluorine, chlorine, bromine, iodine, interhalogen compounds, 1,2-dichloroethane (with liquid ammonia), boron halides, ethylene oxide (polymerization), perchlorates or strong oxidants (chromyl chloride, chromium trioxide, chromic acid, nitric acid, hydrogen peroxide, nitrogen oxide, and liquid oxygen).

Glacier Ice Inc. WCRS Modeling Results

The worst-case release scenario analysis for an Ammonia release from Glacier Ice Inc. was previously modeled as part of a Risk Management Plan certified by a Registered Professional Engineer at Oscar Larson & Associates in November of 2006. The worst-case scenario is the release of 14,200 lbs of ammonia from the Storage tank in the facility. It was assumed that the wind speed at the time of release is 1.5 m/sec and the stability class is F. The duration of the release was assumed to be 10 minutes. The RMP utilized EPA's RMP*Comp™ to model the WCRS of an uncontained liquid spill and vaporization.

Table 16: Glacier Ice Inc. WCRS Modeling Results

Parameter	Value
Material	Ammonia (anhydrous)
Release Rate	1,420 lbs/min
Total Released	14,200 lbs
Distance to Toxic Endpoint	7920 ft

lbs/min = pounds per minute

lbs = pounds

mg/L = milligram per liter

5.5 Hazardous Risk Modeling

Worst-case release scenario modeling was conducted for each facility and chemical of concern for business identified in Table 1 using the methodology and assumptions presented in section 5.2.1. For each facility where a worst-case release scenario model produces a significant level of risk extending beyond that particular facilities boundary, an alternative release scenario is introduced and modeled given assumptions presented in section 5.2.2.

5.5.1 West Coast Quartz - Hydrogen

As reported in the site specific HMBP (See Appendix A), West Coast Quartz at 1000 Corporate Way stores liquefied hydrogen in a 9,500 gallon above ground tank. It is stored at greater than atmospheric pressure and less than ambient temperature.

Properties and Hazards of Liquefied Hydrogen

West Coast Quartz reports liquefied hydrogen as being a flammable liquid and cryogenic hazard. Contact with the chemical during a spill could cause severe frostbite. Liquefied hydrogen would only pose a cryogenic health risk to receptors in the immediate vicinity of the tank during a spill; therefore this hazard was not addressed in this study because the Site would not be impacted.

Hydrogen is a gas at ambient temperature. During a release, liquefied hydrogen would be exposed to air and change states from liquid to gas. Hydrogen gas is colorless, odorless, and easily ignited. Hydrogen gas is lighter than air and flammable over a wide range of vapor and air concentrations. It is not toxic, but could asphyxiate by displacing oxygen in air. It is a regulated flammable material under section 112(r) under the Federal Clean Air Act (CAA) with a CalARP RMP threshold of 10,000 lbs. A chemical database provided by NOAA, called Computer-Aided Management of Emergency Operations (CAMEO), was used to gather chemical properties and LOCs for hydrogen. A summary of properties and levels of concern for hydrogen are given in Table 17 below.

Table 17: Properties and LOCs of Liquefied Hydrogen.

Molecular Formula	H ₂
CAS#	133-74-0
NFPA 704	
Boiling Point (°F)	-423°F
Specific Gravity at -434°F	0.071
IDLH (ppm)	Data Unavailable
RMP Threshold Quantity	10,000 lbs

°F = Fahrenheit

ft³/lb = cubic feet per pound

ppm = parts per million

West Coast Quartz WCRS Modeling Results

Hydrogen stored at West Coast Quartz is characterized as a flammable liquid hazard. Section 2750(e)(1) of the CalARP regulation advises when modeling regulated flammable materials that are normally gases at ambient temperature to assume that the entire quantity of the vessel escapes as a gas in 10 minutes. Therefore, modeling was conducted using ALOHA with the assumptions found in Table 5 for flammable gases and the atmospheric conditions found in Table 4. The quantity stored in the largest container, Q_s , was found by multiplying the above ground tank size by the specific gravity, and is shown below:

$$Q_s = (9500 \text{ gal}) \times \left(\frac{3785 \text{ cm}^3}{\text{gal}} \right) \times \left(\frac{0.071 \text{ g}}{\text{cm}^3} \right) \times \left(\frac{\text{lb}}{453.6 \text{ g}} \right) = 5628 \text{ lbs.}$$

Results are shown in Table 18, below. See Appendix C for ALOHA data output files.

Table 18: West Coast Quartz WCRS Modeling Results

Parameter	Value
Material	Hydrogen
Total Released	5628 lbs
Release Rate	562.8 lbs/min

Overpressure Endpoint	1 psi
Distance to Endpoint	2232 ft or .43 miles

lbs/min = pounds per minute

lbs = pounds

psi = pounds per square inch

ft³ = cubic feet

NA = not applicable

5.5.2 Hayward Quartz - Hydrogen

As reported in the site specific HMBP (See Appendix A), Hayward Quartz at 1500 Corporate Way stores liquid hydrogen in a 9,000 gallon above ground tank. It is stored at greater than atmospheric pressure and less than ambient temperature.

Properties and Hazards of Liquid Hydrogen

Hayward Quartz reports liquefied hydrogen as being a flammable gas hazard which is true, however because it is stored as a refrigerated liquid it also has cryogenic properties. Contact with the chemical during a spill could cause severe frostbite. Liquid hydrogen would only pose a cryogenic health risk to receptors in the immediate vicinity of the tank during a spill and was not further addressed in this study.

Hydrogen is a gas at ambient temperature and pressure. During a release, liquid hydrogen would be exposed to air and change states from liquid to gas. Hydrogen gas is colorless, odorless, and easily ignited. Hydrogen gas is lighter than air and flammable over a wide range of vapor and air concentrations. It is not toxic, but could asphyxiate by displacing oxygen in air. It is a regulated flammable material under

section 112(r) under the Federal Clean Air Act (CAA) with a CalARP RMP threshold of 10,000 lbs. A summary of properties and levels of concern for Hydrogen are given in Table 19 below (CAMEO).

Table 19: Properties and LOCs of Liquefied Hydrogen.

Molecular Formula	H ₂
CAS#	133-74-0
NFPA 704	
Boiling Point (°F)	-423°F
Specific Gravity at -434°F	0.071
IDLH (ppm)	Data Unavailable
RMP Threshold Quantity	10,000 lbs

°F = Fahrenheit

ft³/lb = cubic feet per pound

ppm = parts per million

Hayward Quartz WCRS Modeling Results

Hydrogen stored at Hayward Quartz is characterized as a flammable gas hazard even though it is stored as a liquid. Section 2750(e)(1) of the CalARP regulation advises when modeling regulated flammable materials that are normally gases at ambient temperature to assume that the entire quantity of the vessel escapes as a gas in 10 minutes. Therefore, modeling was conducted using ALOHA with the assumptions found in Table 5 for flammable gases and the atmospheric conditions found Table 4. The quantity stored in the largest container, Qs, was found by multiplying the above ground tank size by the specific gravity, and is shown below:

$$Q_s = (9000 \text{ gal}) \times \left(\frac{3785 \text{ cm}^3}{\text{gal}} \right) \times \left(\frac{0.071 \text{ g}}{\text{cm}^3} \right) \times \left(\frac{\text{lb}}{453.6 \text{ g}} \right) = 5332 \text{ lbs.}$$

Results are shown in Table 18, below. See Appendix C for ALOHA data output files.

Table 20: Hayward Quartz WCRS Modeling Results

Parameter	Value
Material	Hydrogen
Total Released	5332 lbs
Release Rate	533.2 lbs/min
Release Duration	10 minutes
Overpressure Endpoint	1 psi
Distance to Endpoint	2169 ft or .41 miles

lbs/min = pounds per minute

lbs = pounds

psi = pounds per square inch

ft³ = cubic feet

NA = not applicable

5.5.3 Truck-Rail Handling INC. – Methanol

As reported in the site specific HMBP (See Appendix A), Truck-Rail Handling Inc. at 44501 Old Warm Springs Boulevard stores Methanol in rail cars in quantities of 31,250 Gal. Methanol is a flammable liquid stored at ambient temperature and pressure.

Properties and Hazards of Methanol

Methanol is a colorless, volatile liquid with a low flash point. It is highly flammable and completely soluble with water. Its vapors are heavier than air and its vapors may accumulate in openings below ground level. Exposure to vapors can cause irritation to the eyes, head-ache, fatigue, and drowsiness. Methanol is not a regulated chemical for CalARP RMP. A summary of its properties and levels of concern are given in Table 21 (CAMEO).

Table 21: Properties and LOCs of Methanol

Molecular Formula	CH ₃ OH
CAS#	67-56-1
NFPA 704	
Boiling Point (°F)	148.3
Flash Point (°F)	52
Density (lb/ft ³)	49.4
LEL (ppm)	55000
IDLH (ppm)	6000

°F = Fahrenheit

ppm = parts per million

Truck-Rail Handling INC. WCRS Modeling Results

Methanol is a flammable liquid, therefore modeling was conducted using ALOHA consistent with the assumptions found in Table 5 and the atmospheric conditions found in Table 4. No passive mitigation was considered in determining the pool size found from the full quantity of liquid in the rail car. A calculation to determine the area of the puddle formed, which is a factor in the evaporation rate to air, is given below. This calculation assumes the entire quantity of methanol spills instantaneously to a depth of 1 centimeter, or .01 meters.

$$A = (31250 \text{ gal}) \times \left(\frac{.003785 \text{ m}^3}{\text{gal}} \right) / (.01 \text{ m}) \times \left(\frac{\text{ft}^2}{.3048^2 \text{ m}^2} \right) = 127317 \text{ ft}^2$$

The quantity of methanol spilled in pounds is calculated below

$$Q_s = (31250 \text{ gal}) \times \left(\frac{.003785 \text{ m}^3}{\text{gal}} \right) \times \left(\frac{\text{ft}^3}{.3048^3 \text{ m}^3} \right) \times \left(\frac{49.4 \text{ lb}}{\text{ft}^3} \right) = 206,388 \text{ lb}$$

The results of the modeling are show below, in Table 22. ALOHA modeling data output summaries are provided in Appendix C.

Table 22: Truck-Rail Handling INC. WCRS Modeling Results

Parameter	Value
Material	Methanol
Amount Spilled (lbs)	206,388
Release Rate	1,090 lbs/min
Total Released in 10 minutes	10,900 lbs
Distance to Overpressure Endpoint (1 psi)*	No explosion, no part of cloud is above LEL
Burn Rate (lbs/min)**	26,000
Distance to Thermal Radiation Endpoint (5 kW/m ²)**	396 ft or .075 miles

*Assuming an evaporating pool

lbs = pounds

psi = pounds per square inch

ft³ = cubic feet

NA = Not Applicable

5.5.4 Western Digital – Chlorine

As reported in the site specific HMBP (See Appendix A), Western Digital at 44200 Osgood Road contains 44 pounds of chlorine gas stored in a gas cylinder. The gas is stored under pressure and at ambient temperature.

Western Digital does not store, use, or create any chemicals in quantities that qualify them for EPA RMP or CalARP programs.

Properties and Hazards of Chlorine

The HMBP for Western Digital characterizes chlorine as a toxic, a corrosive, an oxidizer, and an irritant. Chlorine is a state and federally regulated material for accidental release prevention programs with a state threshold quantity of 100 pounds. It is a greenish yellow gas with a strong and suffocating odor. The vapors are much heavier than air. The odor threshold is 3.5 ppm. Chlorine is poisonous and may be fatal if inhaled at high concentrations. It can also cause burns to the skin and eyes. It is a strong oxidizing agent and dissolves readily in water, forming a corrosive mixture of hydrochloric acid and hypochlorous acids. A list of its properties can be found in Table 23 (CAMEO).

Table 23: Properties and LOCs of Chlorine Gas

Molecular Formula	Cl ₂
CAS#	7782-50-5
NFPA 704	
Boiling Point (°F)	-29
Specific Volume (ft ³ /lb)	5.4054
IDLH (ppm)	10
Toxic Endpoint	0.0087 mg/L

^oF = Fahrenheit

ft³/lb = cubic feet per pound

ppm = parts per million

Western Digital WCRS Modeling Results

Chlorine is a toxic gas. Modeling was conducted using ALOHA with the assumptions found in Table 5 pertinent to toxic gases, the atmospheric conditions found in Table 4. Since at Western Digital, chlorine is stored under pressure, the release was assumed to occur over a span of 10 minutes, as suggested in CalARP Section 2750.3(e)(1). Results are shown in Table 24, below. See Appendix C for ALOHA data output files.

Table 24: Western Digital WCRS Modeling Results

Parameter	Value
Material	Chlorine
Release Rate	4.4 lbs/min
Total Released	44 lbs
Distance to Toxic Endpoint	2856 feet
Distance to IDLH	1383 feet

lbs/min = pounds per minute

lbs = pounds

psi = pounds per square inch

ft³ = cubic feet

NA = Not Applicable

5.5.4.1 Western Digital – Chlorine Alternative Release Scenario

It is more likely that a release of chlorine from Western Digital would occur from inside the building where it is stored for use. EPA’s RMP Guidance document suggests using a mitigation of 55 percent for releases occurring indoors. This would reduce the release rate of chlorine to 2.42 pounds per minute. An alternative release scenario was modeled in ALOHA using the atmospheric assumptions for alternative release scenarios and the reduced release rate for indoor releases. The ALOHA output file is provided in Appendix B and a summary of the results are shown in Table 25.

Table 25: Western Digital ARS Modeling Results

Parameter	Value
Material	Chlorine
Release Rate	2.42 pounds/minute
Total Released	2.42 pounds
Distance to Toxic Endpoint	972 feet
Distance to IDLH	513 feet

5.5.5 Western Digital – Ammonia (anhydrous)

Western Digital at 44100 Osgood Road stores anhydrous ammonia in a quantity of 250 ft³ (measure at STP) which is equal to approximately 11.9 pounds. Anhydrous ammonia is both a federal and California state regulated material for accidental release prevention programs with threshold quantities of 10,000 pounds and 500 pounds, respectively. At Western Digital, the gas is stored under pressure and at ambient temperature.

For a summary of the properties and levels of concern of anhydrous ammonia see Table 15. Modeling of a full release of the anhydrous ammonia from Western Digital was carried out using the assumptions found in Table 5 for toxic gases and the atmospheric conditions found in Table 4. The ALOHA modeling software was used to estimate the distance to the toxic endpoint given a worst case release of anyhydrous ammonia. Outputs from the ALOHA software are available in Appendix C while a summary of the results are given in Table 26.

Table 26: Western Digital WCRS Modeling Results (Ammonia)

Parameter	Value
Material	Ammonia
Release Rate	1.19 pounds per minute
Total Released	11.9 pounds
Toxic Endpoint	0.0014 mg/L
Distance to Endpoint	219 feet or 0.0415 miles

mg/L = milligrams per Liter

5.5.6 Western Digital – Silane

As reported in the site specific HMBP (See Appendix A), Western Digital at 44100 Osgood Road contains 60 ft³ (measured at STP) of silane gas stored in a gas cylinder. This equates to approximately 5.28 pounds (see calculations below). The gas is stored under pressure and at ambient temperature.

Properties and Hazards of Silane

Silane is used in the production of amorphous silicon. Silane is a colorless gas with a strong and repulsive odor. The HMBP for Western Digital characterizes silane as a pyrophoric, flammable, and pressure release hazard. It is readily ignited by sparks, heat, and flame. In fact, silane can ignite spontaneously in air at room temperature. Silane is a federally regulate flammable material for accidental release prevention with a threshold quantity of 10,000 pounds. Silane is not federally recognized as a toxic material – however, its vapors may be toxic if inhaled at high concentrations. A summary of the properties and LOCs for silane are given below in Table 27.

Table 27: Properties and LOCs of Silane

Molecular Formula	H ₄ Si
Molecular Weight (g/mol)	32.1
CAS#	7803-62-5
NFPA 704	
Boiling Point (°F)	-169°F

°F = Fahrenheit

Western Digital WCRS Modeling Results

Silane is a flammable gas. Modeling could not be conducted using ALOHA due to the complexities of modeling a chemical which spontaneously ignites when exposed to air. Because silane is an extremely dangerous flammability hazard, it is important to estimate this risk by other means. This can be done using the EPA March, 2009 RMP Guidance document which includes a table (Reference Table 13) that estimates distances to an overpressure endpoint from the quantity of a chemical in a vapor cloud.

First it is necessary to determine how much silane exists in the vapor cloud in pounds. Due to the fact the quantity of silane provided in the HMBP is 60 ft³ measured at STP, the amount of silane in the cylinder in moles can be found using the ideal gas law:

n = moles

$$V = \text{Volume of cylinder (m}^3\text{)} = (60 \text{ ft}^3) / [35.315 \text{ (ft}^3\text{/m}^3\text{)}] = 1.69 \text{ m}^3$$

P = standard Pressure (atm) = 0.986 atm

T = standard Temperature (K) = 273.15 K

$$R = \text{ideal gas constant} = 8.20 \times 10^{-5} \left(\frac{\text{m}^3 \cdot \text{atm}}{\text{K} \cdot \text{moles}} \right)$$

$$n = \left(\frac{P \cdot V}{R \cdot T} \right) = \left(\frac{1.69 \times .986}{8.20E^{-5} \times 273.15K} \right) = 74.7 \text{ moles silane}$$

By taking the amount of moles of silane and multiplying by the molar mass and converting this mass to pounds, the amount of silane in the cylinder in pounds can be found:

$$Q_{\text{Silane}} = \text{Mass of silane in pounds} = (74.7 \text{ mol}) \times [(32.1 \text{ (g/mol)}) / (453.6 \text{ (g/lb)})]$$

$$Q_{\text{Silane}} = 5.28 \text{ pounds}$$

Reference Table 13 in the EPA RMP guidance gives distance to overpressure of 1 PSI based on the TNT Equivalent Method. The smallest quantity of silane in the Cloud is 500 pounds and the corresponding distance to the overpressure endpoint is .06 miles or 317 feet. The actual maximum quantity of silane stored at the facility is 5.28 pounds which is significantly smaller than the smallest amount provided in the reference table so it is unlikely that the silane threat zone would exit the businesses property line and have any offsite consequence. See Appendix C for ALOHA modeling outputs for silane and Table 13 from the EPA RMP Guidance.

5.5.7 7UP Bottling Co. – Propane

As reported in the site specific HMBP (See Appendix A), 7UP Bottling Co. at 2875 Prune Avenue stores liquid propane in a 900 gallon cylinder. The propane is stored under pressure and at ambient temperature.

Properties and Hazards of Propane

7UP Bottling Co. reports propane as a flammable liquid hazard in its HMBP.

Propane is a gas at ambient temperature and pressure. During a release, liquid propane would be exposed to air and change states from liquid to gas. Propane gas is colorless and has a faint petroleum-like odor. Propane vapors are heavier than air and its vapors could asphyxiate by the displacement of air. It is easily ignited and is a regulated flammable material under section 112(r) under the Federal Clean Air Act (CAA) with a CalARP RMP threshold of 10,000 lbs. It is not a federally regulated flammable material. A summary of properties and levels of concern for propane are given in Table 28 below (CAMEO)

Table 28: Properties and LOCs of Propane

Molecular Formula	C ₃ H ₈

ppm = parts per million

7-UP Bottling Co. WCRS Modeling Results

Propane stored at the 7UP Bottling Co. is characterized as a flammable liquid hazard. Section 2750(e)(1) of the CalARP regulation advises when modeling regulated flammable materials that are normally gases at ambient temperature to assume that the entire quantity of the vessel escapes as a gas in 10 minutes. Therefore, modeling was conducted using ALOHA with the assumptions found in Table 5 for flammable gases and the atmospheric conditions found in Table 4. The quantity stored in the largest container, Q_s, was found by multiplying the above ground tank size by the specific gravity, and is shown below:

$$Q_s = (900 \text{ gal}) \times \left(\frac{3785 \text{ cm}^3}{\text{gal}} \right) \times \left(\frac{0.59 \text{ g}}{\text{cm}^3} \right) \times \left(\frac{\text{lb}}{453.6 \text{ g}} \right) = 4430 \text{ pounds}$$

Results are shown in Table 29, below. See Appendix C for ALOHA data output files.

5.5.8 Petroleum Pipeline- Pentane

KMEP and CPL operate liquid petroleum fuel pipelines along the Union Pacific Railroad right of way adjacent to the future BART track. The railroad right of way and pipeline travels roughly through the center of the entire Study Area on a north-south axis. Requests were made to the pipeline operators to obtain information on types of fuels transported and operating parameters of the pipeline, however due to security considerations by the company, limited information was provided. According to the NPMS which is affiliated with the US Department of Transportation, the Chevron Pipe Line Company transports gasoline through the pipeline. Gasoline is a mixture of hydrocarbons containing molecules between 4 and 12 carbons in length. As a conservative estimate, pentane was chosen to represent the worst case hypothetical fuel flowing through the pipelines. Pentane is a shorter range of hydrocarbons that constitute gasoline, has a higher heat of combustion, and therefore has more severe explosive and flammable properties. Octane, a less conservative but more accurate pure chemical to model in the place of gasoline, was also modeled.

Properties and Hazards of Pentane (C₅H₁₂)

Pentane is a highly flammable colorless liquid. Pentane floats on water, however, the vapors are heavier than air. It has a low toxicity however very high vapor concentrations can produce narcosis. Properties and levels of concern for pentane are summarized in Table 30 (CAMEO).

Table 30: Properties and LOCs of Pentane

Molecular Formula	C ₅ H ₁₂

Chevron Pipeline Company WCRS Modeling Results

Two liquid petroleum product pipelines run parallel and adjacent to the Union Pacific Railroad tracks and future BART track. WCRS from the pipeline were assumed to occur from a full rupture, meaning the size of the rupture is equal to the diameter. A 15 minute release was assumed, as specified in Table 4-9, pg. 4-36, of the CDE protocol, and ALOHA was used in order to determine the maximum flow rate (See Appendix C). WCRS pipeline releases were treated with the same assumptions used for flammable

liquids. Release scenarios are provided for pentane (a very conservative assumption for a flammable liquid fuel transferred) and octane (a less conservative assumption). Table 31 shows the modeling results for pentane.

Table 31: Chevron Pipeline Co. WCRS Modeling Results

Parameter	Value

kW/m² = kilowatts per square meter

5.5.8.1 Chevron Pipeline Company Alternative Release Scenario Results

To exhibit an alternative release scenario, octane was chosen as a fuel to be released during a full rupture from the Chevron pipeline. Octane is more representative of the median hydrocarbon constituent of gasoline in terms of carbon chain length. Therefore, it has properties that more closely represent gasoline as whole. In this scenario automatic shut-off valves would actively mitigate the release duration of octane to five minutes. This quantity of octane would form an evaporating pool or pool fire and the risk modeling would use WCRS assumptions for flammable liquids found in Table 5.

Properties and Hazards of Octane (C₈H₁₈)

Octane is a colorless liquid with a gasoline like odor. It is less dense and floats on water. It is an irritant to the eyes on contact and to the respiratory tract. It is a fire hazard, with a flash point of 56°F and vapors heavier than air. Properties and levels of concern for octane are provided in Table 32 (CAMEO).

Table 32: Properties and LOCs of Octane

5.5.9 PG&E Natural Gas Pipeline – Methane

A Pacific Gas and Electric Company gas service line is in operation providing service to Tesla Motors Inc. electric vehicle manufacturing plant. In a letter from PG&E to TRC dated February 3rd, 2012 (See Appendix E), it was found that this service line was named “GCUST5900”, is 6-inches diameter, underground, and has a maximum operating pressure of 150 psig. The CDE regards natural gas pipelines with a maximum operating pressure in excess of 80 psig as high pressure pipelines. The CDE requires a risk analysis study done for high pressure pipelines located within 1500 feet of a proposed school site.

Typically, natural gas consists of primarily methane mixed with approximately 20% ethane and other hydrocarbons. Present in natural gas are also other extremely small amounts (<1%) of other impurities. Because methane is both the most prevalent and most flammable of the constituents of natural gas, this risk assessment will assume conservatively that the WCRS consists of a pure solution of methane.

Properties and Hazards of Methane

Methane is the simplest alkane and the primary constituent of natural gas. Methane is an extremely flammable, colorless, and odorless gas which is lighter than air. Properties and LOCs for methane are given below in Table 34.

Table 34: Properties and LOCS of Methane

Molecular Formula	CH ₄
CAS#	74-82-8
NFPA 704

PG&E Natural Gas Pipeline WCRS Modeling Results

Modeling for a PG&E pipeline natural gas pipeline release was conducted assuming pure methane using the gas pipeline scenario provided by ALOHA and with the atmospheric conditions found in Table 4. Assumptions found in Table 5 for flammable gases was used with the exception that the quantity released from the pipeline after 15 minutes was involved in the vapor cloud explosion, as specified in the CDE protocol. The modeling results are summarized in Table 35 below. ALOHA data outputs are provided in Appendix C.

Table 35: PG&E Natural Gas Pipeline WCRS Modeling Results

NA = Not Applicable

6.0 MITIGATION

Mitigation measures can be used to lessen the severity of off-site consequences during a hazardous material release. These are identified in Section 6.1. Section 6.2 also introduces measures to reduce the probability and consequences of pipeline releases. In addition to mitigation, a site specific emergency response plan, coordinated with local emergency responders, should be prepared for sites within the range of off-site consequences.

6.1 Mitigation Measures for Stationary Source Hazards

The following mitigation measures are those that are recommended as feasible actions that can be considered during future residential or commercial development site design and review to mitigate risks posed by hazards found in the Study Area. These measures only include those which are within the control of the City of Fremont, not those that are in the control of the owners and/or operators of the hazards (i.e., toxic gas deluge systems, pipeline emergency shut-off valves, secondary spill containment).

1. Setback Distance

The most basic measure that can be used to mitigate risk from any hazardous material release or ignition event is to put space between the sensitive receptors and the hazard source. In doing so, the transfer distance and time is greater which, in most cases, dissipates or dilutes the risk. For example, increasing the setback distance could:

- Allow more time for a toxic gas plume to dilute to lower the concentration prior to exposure to the site receptors.
- Lower the radiant heat impacts to the site from a fuel spill pool fire by allowing the heat to dissipate.
- Mitigate risks from a vapor cloud explosion over pressurization by allowing the force of the pressure barrier to dissipate.

Depending upon the development plan within the Study Area and the availability of space, increasing the setback distance may not be feasible. An alternate mitigation of a physical barrier may be possible, or the use of a decreased setback distance in conjunction with a physical barrier.

2. Blast Walls

Blast walls could be effective in mitigating risks posed by spill mobility, thermal radiation, and vapor cloud explosion over pressurization. Blast walls could also provide a secondary benefit of mitigating heavier than air toxic gas releases however should not be installed for this sole purpose. Blast walls are typically designed and constructed with reinforced concrete masonry. Depending on the risks, design specifications will vary (e.g. dimensions, construction materials, strength, and durability). The blast wall can be designed with further reinforcements to withstand high blast forces.

A blast wall would serve as a barrier from risks posed by a fuel spill pool fire. The wall would physically limit the mobility of a pool to a future site within the Study Area and serve as barrier against dangerous thermal radiative flux.

Placing blast walls between proposed development areas and existing pipelines could help mitigate thermal radiation and explosion overpressure risks posed by a pipeline release. Blast walls constructed along the northeastern portion of the lot east of Old Warm Springs Boulevard and south of Tavis Place could reduce the risks to future developments on that lot occurring from a propane release and overpressure threat from the 7UP Bottling Company. Additionally, a blast wall positioned along the north side of Corporate Way could help mitigate against overpressure risks resulting from a liquid hydrogen release at either the West Coast Quartz or Hayward Quartz businesses.

A blast wall could also provide an added benefit to mitigate risks posed by a heavier than air toxic gas release. A gas that is heavier than air (i.e., chlorine) will tend to stay low to the ground. Because of this, blast walls positioned close to the point of the release may be effective in increasing upwind dilution of a concentrated heavier than air gas. Following sufficient mixing of a gas with air, the density of the gas would begin to resemble that of air, and a wall would no longer provide mitigation. The blast wall mitigation measure should only be considered an added value to other alternatives due to the highly variable components of these toxic gas release scenarios. A blast wall would not provide mitigation against lighter than air gases.

3. Earthen Berms

Earthen berms can primarily be used to divert the flow of a release away from a sensitive receptor site. An earthen berm, in conjunction with a setback, could be a viable strategy for mitigating thermal radiation risks from a fuel spill pool fire. If a flammable liquid spill could breach the property boundary and an ignition source was present, this scenario could result in fire on a site. An earthen berm could prevent spreading of the pool towards a site. Additional setback from the berm could minimize thermal radiative flux impacts and render non-significant risk to potential sensitive receptors.

Earthen berms are typically used for low height applications due to design criteria and special footprint requirements. An earthen berm could potentially mitigate the effects of over pressurization from a vapor cloud explosion; however, this may not be a feasible mitigation option due to space restrictions.

Typically, vertical reinforced concrete masonry blast walls are employed for use against over pressurization risk.

4. Building Orientation

Impacts from vapor cloud explosion over pressurization could be mitigated by orientating future building structures to minimize the exposed surface area within line of sight of a hazard. This measure will dissipate some of the shock wave energy away from the building façades and effectively reduce the physical damage to the buildings and their occupants. Orienting a building with its corner facing the potential blast source is a good example of how to reduce the directly exposed building surface area. Another example would be to install a blast wall and tier the face of the building behind the wall, facing the potential blast source, such that the trajectory of the over pressurization shock wave that breaches the top of the wall does not directly impact the upper floors of a building.

Strategic building orientation could be applied to structures in the proposed development area, located near a pipeline or other identified overpressure source, so as to reduce structural damage in the event of an explosion. In addition to the Chevron Pipeline Company and PG&E pipelines, key areas include the

proposed development location southwest of the 7UP Bottling Company and the proposed development area adjacent to West Coast Quartz and Hayward Quartz, just south of Corporate Way.

5. Building Ventilation System Shutdown

Shutting down the building ventilation system may help protect occupants from exposure to a toxic gas release. The building has to be designed such that the exchange between indoor and outside air are minimized. This would require sealed air tight windows and mechanically controlled air exchange that might not be practical for residential units. The ventilation system also has to be designed with either an automated or manual shutdown feature. A manual shutdown would be a less expensive design, but it requires the knowledge that the release has occurred because someone in the building needs to trigger it. An automated design would employ contaminant sensors at the building air intakes that would trigger a shutdown of the outside air intakes when preset air contaminant levels of concern are detected. As part of the shutdown system, persons in and around such buildings could be instructed to “shelter-in-place” (SIP). SIP refers to keeping building occupants indoors, closing doors and windows, and shutting off ventilation fans and dampers to minimize the entrainment of chemicals from outdoors into buildings.

A study exploring the effectiveness of SIP in urban commercial districts concluded that SIP procedures were effective provided that ventilation systems were off; however, any delay in turning off ventilation systems was shown to greatly reduce SIP effectiveness. Modeling results indicated that in buildings where mechanical ventilation was maintained throughout the toxic gas release event SIP was only modestly effective, reducing casualties by an estimated 6% as opposed to the predicted 78% reduction when mechanical ventilation systems were shut off (Wanyu et al., 2008).

Portions of the proposed development fall within the toxic endpoint range of chemicals stored at various nearby locations such as chlorine, ammonia, hydrocyanic acid, and nitric acid. Buildings located within the WCRS toxic endpoint range of these sources could employ building ventilation shutdown symptoms to mitigate occupant’s exposure to harmful concentrations of toxic gasses in the event of a release scenario. Urban density multi-family housing type construction with centralized controls and building management may lend themselves to feasibly incorporating this mitigation strategy.

6. Building Materials

Building construction is essentially the last line of defense against the potential hazards for the occupants inside. The building materials can be upgraded and catered to defend against perceived hazards. The part of the construction most vulnerable to vapor cloud over pressurization is the windows. Windows in the direct line of an over pressurization hazard could be upgraded to tempered blast-resistant models that are designed to withstand blast force. This could protect individuals from hazards posed by flying glass from a shattered window pane. Using fire-resistant building materials also lowers risks posed to the occupants by reducing the likelihood of a fire, or slowing the propagation of the fire, through the building (allowing more time for evacuation).

In areas of the proposed development where buildings could be exposed to overpressure from a vapor cloud explosion or high levels of thermal radiation (e.g. structures near pipelines, Truck-Rail Handling Inc., West Coast Quartz, Hayward Quartz, and 7UP Bottling Company), incorporating tempered windows and enhanced fire ratings into structural designs could reduce the risks posed by these hazards.

For structures in areas that fall within the toxic endpoint range of chlorine, ammonia, hydrocyanic acid, and nitric acid, airflow exchange through the building envelope could be minimized through HVAC design and building material selection. Opting for construction types such as concrete panels versus wood-frame designs would increase the effectiveness of SIP procedures (Wanyu et al., 2008).

6.2 Mitigation and Management Measures for Pipelines

In 2004, a hazardous liquid pipeline carrying high pressure premium gasoline ruptured and instantaneously ignited causing an explosion and fire in a residentially zoned area of Walnut Creek, Ca. A nearby two-story residential structure on the other side of a sound wall caught fire. No residents were harmed. The event cause was manmade and preventable. A similar pipeline(s) passes through the Study Area. It is important that during any future construction (i.e. excavation) in the vicinity of these pipelines good communication exists between the contractor, fire department, and pipeline operators. Otherwise these pipelines remain inherently safe provided proper maintenance and operational oversight are diligent.

The historical release event described above, the 2010 San Bruno, California natural gas pipeline explosion, and the WCRSs modeled in this report, show that there is a definite potential for severe off-site consequences in the event of a pipeline release and explosion. Mitigation is an important consideration to lessen the probability and severity of these consequences. Many mitigation measures are the responsibility of the pipeline operators. At the very least, pipeline operators must comply with state and federal regulations. The California Office of the State Fire Marshall (SFM) and the California Public Utilities Commission (CPUC) regulate hazardous liquid pipelines and natural gas pipelines in the State of California, respectively. Pipeline operators claim to exceed the safety requirements of the regulations.

Siting sensitive receptors in the vicinity of existing pipeline right of ways is not unprecedented. In fact, the CPL and KMEP hazardous liquid pipelines pass near and through residential areas just north of the Study Area. There are not regulations or firmly established standards written for the siting of residential receptors in the vicinity of pipelines, however the CDE has established a protocol for the siting of Schools. Namely, the California Education Code Section 17213 specifies that a school district may not acquire land for a school site that contains an aboveground or underground hazardous liquid or gas pipeline. Also, per CCR Title 5, Section 14010(h), “the [school] site shall not be located near an above ground water or fuel storage tank or within 1,500 feet of the easement of an aboveground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional.”

This risk assessment found that the pipelines located in the Study Area could pose hazards to future sensitive receptors in the event of a WCRS. Although pipeline operators must adhere to state and federal regulations, it may be in one’s best interest to consider the following measures which can reduce the probability of a pipeline release or the severity of consequences should a release and explosion occur.

6.2.1 Measures to Reduce the Probability of a Pipeline Release

By requesting operators to do the following, the probability of a pipeline release would decrease.

1. Conduct More Frequent and Rigorous Safety Testing

Pipeline operators can perform tests to test pipeline integrity. Hydro testing will show that pipelines can withstand certain pressures while robotic “smart pig” testing can give operators more detailed information. By increasing the frequency of pipeline testing, the probability that a weakness in the pipeline integrity will go undetected decreases.

2. Install Better Signage

Installing more visible pipeline signs, reducing the distances between signs, and making sure the location is accurate will reduce the risk of accidental rupture during excavation activities. Improper line locating by a pipeline operator was found during an investigation of a release from the pipeline explosion in 2004.

3. Provide Right of Way Encroachment Protection

By protecting pipeline right of ways from unauthorized entrants (i.e. trespassers), the risk of an intended or accidental pipeline release is mitigated.

4. Reduce Operating Pressure

Requesting pipeline operators to reduce pipeline operating pressure reduces the risk that a rupture or leak would occur from over pressurization. The severity of consequences following a release decrease as operating pressure decreases.

6.2.2 Measures to Reduce the Severity of Consequences of a Pipeline Release

The mitigation measures presented in Section 6.1 should be considered to lessen the severity of consequences during a pipeline release. There are also some further mitigating measures presented below that could apply to pipelines (and other stationary source hazards):

1. Site Design

For land uses that correspond with high concentrations of people participating in outdoor activities (such as parks or schools) it may be advisable to site buildings (if any) closer to the pipeline than the empty spaces when feasible. Properly designed buildings could temporarily provide people with fire and heat protection from pipeline fires. If this is not feasible, designs should be considered such that the lowest concentrations of people would be located near the pipeline.

2. Eliminate Ignition Sources

Sources of ignition (i.e. electrical equipment, boilers, water heaters, etc.) should be located away from pipelines such that in the event of a release the probability of a fire or vapor cloud explosion decreases. It is advisable for electrical equipment located in proximity to the pipelines to be rated for use in hazardous or explosive atmospheres.

3. Installing Leak Monitoring and Alarm Systems

Leak monitoring systems and alarm systems should be used to notify sensitive receptors of a hazardous pipeline release. An alarm could allow sensitive receptors more time to evacuate prior to a pool fire or detonation. Leak monitoring systems could be tied in to a building ventilation shutdown, such as introduced in section 6.1, in order to help minimize gas or vapors from entering buildings.

4. Installing Automatic Shut-Off Valves

Shut-off valves can stop the flow of liquid or gas through sections of pipeline. Automatic shut-off valves would activate following an indication of a leak or rupture, such as an unsuspected drop in pressure. By strategically locating automatic shut-off valves adjacent to a site of interest, the volume of a pipeline spill could be significantly reduced and thus mitigate the severity of consequences.

7.0 CONCLUSION AND RECOMMENDATIONS

The Warm Springs/South Fremont BART Station Study Area is currently comprised of general industrial and technological industrial zoned areas. As a result, existing businesses and public and private utility structures (i.e. pipelines) sited within the Study Area store, generate, and use hazardous materials which can exhibit toxic, flammable, and explosive properties. In this Study, the locations of these businesses or pipelines, the names of the hazardous materials, and the quantities of the hazardous materials have been identified by review of Hazardous Materials Business Plans and through correspondence with pipeline operators.

Worst case release scenario modeling conducted in the Study has shown that there is a possibility for off-site consequences which could pose a health and safety risk to future sensitive receptors within the Study Area. Worst case release scenarios are based on conservative hypothetical parameters which are highly unlikely. Therefore, the distances to toxic, flammable, and explosive endpoints found herein are extremely conservative estimates.

Although the probability of a worst case release scenario occurring is small, the locations of hazardous materials within the Study Area and their respective distances to toxic, flammable, and explosive endpoints should be taken into account when siting future sensitive receptors. Appropriate mitigation measures, when feasible, should be incorporated in the design of future sites to safeguard against the hazards identified. If mitigation is adopted, which aims to prevent against a worst case release scenario, it is likely that it would also be adequate in preventing against a smaller, more common, and less consequential release.

The probability of a release occurring largely depends on the safe operating procedures of the businesses using hazardous materials. It is their obligation to abide by state and federal regulations which are designed to ensure hazardous materials are used, stored, and generated in a safe manner. In order to abate risk to future sensitive receptors over time, the City should conduct timely inspections. The City could also investigate increasing the safety standards practiced by industries within the Study Area. For instance, large manufacturing industries are required to have Risk Management Plans and Process Safety Management plans which are intended to reduce the likelihood of releases and lessen the impacts should they occur. Given the circumstance of siting sensitive receptors in an existing industrial area, the City could collaborate with industries to instill these management practices usually reserved for much larger facilities.

Relocating hazardous materials to areas of a facility furthest removed from sensitive receptors or relocating businesses entirely is also an option to reduce the risk of consequences in the Study Area. The feasibility of relocating hazardous materials would depend on process operations and cooperation between the City and business owners.

8.0 LIMITATIONS

The findings presented in this report are based in part on information provided by Hazardous Material Business Plan from businesses in the City of Fremont, information from the Chevron Pipeline Company, and modeling protocols set forth by the EPA, CalARP, and CDE. The findings are accurate only to the extent that the information gathered by and provided to TRC was accurate and complete.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Fremont Warm Springs Community Plan Area Fremont, California

EXECUTIVE SUMMARY

This report presents the activities and findings of a Phase I Environmental Project Area Assessment (“Phase I ESA”) performed by BASELINE Environmental Consulting (“BASELINE”) for the proposed Fremont Warm Springs Community Plan (“Project”) Area. The purpose of the Project is to create a guidance document for the transit oriented development of the approximately 925-acre area surrounding the future Warm Springs Bay Area Rapid Transit (“BART”) Station (Figures 1 and 2). The Project Area is expected to be developed as an urban employment center with supportive residential and mixed uses.

This Phase I ESA has identified the following potential recognized environmental conditions (“RECs”) and other environmental concerns affecting the Project Area:

- **Hazardous materials releases**

A review of regulatory agency records indicates that there were 51 sites with documented soil and/or groundwater contamination located within or near the Project Area (Figure 2; Table 3). Nineteen of these sites are active cases.

- **Current and historical industrial and light industrial land use**

A review of historical aerial photographs and topographic maps shows that industrial and light industrial buildings had been developed in the Project Area by 1961 (Table 1). During the site reconnaissance it was observed that the Project Area contains primarily industrial and light industrial land uses (Table 4). Observations of the Project Area and its adjoining properties identified 119 sites with evidence of hazardous material use (Table 3). Two hundred eighty-one sites were listed on hazardous materials transportation, use, storage, and/or disposal regulatory agency records. The widespread current and historical use of hazardous materials on and surrounding the Project Area indicates that there is a potential for undocumented hazardous materials releases to be present within the Project Area.

- **Current and historical agricultural land use**

A review of historical aerial photographs and topographic maps shows that the Project Area and the surrounding areas were being used for agriculture by 1939 (Table 1). Residues from historical and current pesticide and herbicide use could potentially be present in shallow soils within the Project Area. Historical pesticide use is of particular

concern because arsenic from inorganic pesticides and residues from organochlorine pesticides used in the past have the potential to persist for many decades in shallow soil.

- **Railroads**

The Union Pacific Rail Corridor runs approximately north to south across the Project Area (Figure 3). The railroad tracks have been present at the Project Area since at least 1939 (Table 1). Chemicals associated with historical railroad operations are commonly found along railroad right-of-ways. The most frequently reported contaminants are metals, including arsenic, pesticides, polychlorinated biphenyls (“PCBs”), and constituents of petroleum hydrocarbons.

- **Pipelines**

Two underground petroleum pipelines are located along the Union Pacific Rail Corridor right-of-way adjacent to the Tesla Factory (Figure 3). One pipeline, operated by Chevron Pipe Line Company, turns east along South Grimmer Boulevard. The other pipeline, operated by Santa Fe Pacific Pipeline, L.P., continues to run north along the Union Pacific Rail Corridor right-of-way. Contaminants of concern from petroleum pipelines include gasoline, diesel, and jet fuel, as well as benzene, toluene, ethylbenzene, and xylenes (“BTEX”) and polynuclear aromatic hydrocarbons (“PAHs”).

- **Aerially-Deposited Lead**

Exposed shallow soils in the Project Area within approximately 30 feet of the edge of major roadways, including I-880 and I-680, could be contaminated with aerially-deposited lead (“ADL”) from historical vehicle emissions.

- **Hazardous materials in structures and transformers**

Based on the age of buildings in the Project Area, asbestos-containing material and lead-based paint may be present. Transformers containing PCBs may also be present. The disturbance of these structures and transformers as a result of future development could release hazardous materials during construction activities, which could pose a risk to human health and the environment during Project activities.

RECOMMENDATIONS

Due to the potential presence of hazardous materials releases from current and historical land uses, as well as the documented releases of hazardous materials in and near the Project Area, BASELINE recommends that a parcel-specific Phase I site assessment should be conducted prior to the redevelopment of any of the parcels within the Project Area. The parcel-specific Phase I assessment should rely on the research and findings of this Phase I site assessment to the extent practical. Based on the findings of a parcel-specific Phase I site assessment and proposed future land uses of the parcel, additional investigation, including soil, groundwater, and/or soil gas sampling, may be warranted.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Fremont Warm Springs Community Development Plan Area Fremont, California

1. INTRODUCTION

This report presents the activities and findings of a Phase I Environmental Project Area Assessment (“Phase I ESA”) performed by BASELINE Environmental Consulting (“BASELINE”) for the proposed Fremont Warm Springs Community Plan (“Project”) Area. The purpose of this Project is to create a guidance document for the transit-oriented development of the approximately 925-acre area surrounding the future Warm Springs Bay Area Rapid Transit (“BART”) Station (“Project Area”) (Figure 1). The Project Area is expected to be developed as an urban employment center with supportive residential and mixed uses.

This Phase I ESA was performed at the request of FirstCarbon Solution – Michael Brandman Associates, on behalf of the City of Fremont, the project proponent. This Phase I ESA was performed in accordance with ASTM International, Method E1527-05. ASTM Method E1527-05 includes provisions designed to meet the requirements of the U.S. Environmental Protection Agency’s (“EPA”) All Appropriate Inquiry contained in Title 40 of the Code of Federal Regulations Part 312.

The purpose of this Phase I ESA was to determine whether Recognized Environmental Conditions (RECs)¹ are present at the Project Area based on current and/or previous land uses. The scope of work for the Phase I ESA included: 1) a review of historical land use information, including historical topographic maps and aerial photographs; 2) a review of environmental records from local, state, and federal regulatory agencies; and 3) a reconnaissance of the Project Area.

2. SITE DESCRIPTION

The Project Area is an approximately rectangular area bounded to the west by the Interstate 880 highway (“I-880”) and to the east by the Interstate 680 highway (“I-680”); portions of the Project Area extend south to Mission Boulevard and north to approximately 100 feet south of Auto Mall Parkway (Figures 1 and 2). The Union Pacific Rail Corridor runs approximately north to south across the Project Area. The BART transit line will use this corridor as its right-of-way.

¹ RECs are defined in ASTM E1527-05 as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property.” According to ASTM E1527-05, the term “REC” is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental authorities.

Approximately 300 acres of the 925-acre Project Area contains property belonging to the Tesla Factory, an automobile manufacturing facility (Figure 3).

According to 1973 United States Geological Survey topographic maps for the Project Area, the ground elevation ranges from about 10 feet National Geodetic Vertical Datum of 1929 (“NGVD 1929”) to the west and 100 feet NGVD 1929 to the east (USGS, 1973a,b). Surface topography in the Project Area and in surrounding areas is relatively flat, with the exception of bermed areas in the north, east, and southeast portions of the Tesla Factory property.

The Project Area is underlain by alluvial fan and floodplain deposits deposited by streams flowing from the Diablo Range foothills to the east and by estuarine deposits from the San Francisco Bay to the west. The sedimentary deposits below the Project Area generally consist of clays interbedded with sand and gravel (DTSC, 1999). Based on environmental investigations, reviewed for this investigation, groundwater flow direction ranges from west to south and depth to groundwater ranges from about 5 to 25 feet below ground surface (IRIS Environmental, 2012; Groundwater Cleaners, 2009; Earth Systems Pacific, 2012).

There are two channelized creeks that cross the Project Area: Agua Caliente in the south and an unnamed creek in the north. The intermittent stream Agua Fria is located about one-half mile south of the Project Area, while the channelized creek Canada del Aliso is about 100 feet north of the Project Area. Both of these creeks drain to the west into Laguna Creek, which ultimately drains into San Francisco Bay.

3. HISTORICAL LAND USES

Historical land uses at the Project Area and adjacent properties were evaluated to assess potential sources of hazardous materials that could affect soil or groundwater quality. Historical land uses in the vicinity of the Project Area were determined through review of available historical documents (including topographic maps and aerial photographs) dating from 1914 through 1999 (Table 1). Sanborn Maps were not available for the Project Area. Historical land use records reviewed for this Phase I ESA are included in Appendix A.

3.1. Project Area

The Project Area was predominantly agricultural in the 1939, 1946/1949, and 1956 aerial photographs. Additionally, Southern Pacific and Western Pacific railroad tracks, mapped on the first available topographic maps from 1953, are visible on these aerial photographs, with tracks in the present railroad corridor. Several orchards were located within the Project Area during this time.

Between 1956 and 1961, land uses in the Project Area began to become more diverse. Multiple new commercial/industrial buildings are shown in the 1961 topographic map. The 1968 aerial photograph and 1968 topographic map indicate that an automobile assembly plant had been constructed within the Project Area at the current Tesla Factory site. A railroad yard had been constructed immediately east of the automobile assembly plant. Additional new

commercial/industrial buildings have been developed within the Project Area between 1961 and 1968.

The 1973 topographic map shows new buildings developed within the Project Area and an additional railroad yard developed north of the automobile assembly plant. The 1979, 1982, 1993, and 1999 aerial photographs all show the development of new commercial/industrial buildings throughout the Project Area over time, although some parcels remained in agricultural use throughout this period. Additionally, the 1993 aerial photograph shows that the railroad yard north of Grimmer Boulevard and the automobile assembly plant had been expanded. Based on the site reconnaissance, discussed below in Section 6, current land uses in the Project Area are substantially the same as those in 1999.

3.2. Adjoining Properties

With the exception of the development of Interstate highways, historical land uses on adjoining properties were similar to those at the Project Area. Adjoining areas were predominantly agricultural on the 1939, 1946/1949, and 1956 aerial photographs. In the 1961 topographic map, I-880 had been constructed west of the Project Area. The 1968 topographic map and 1968 aerial photograph show that a golf course had been developed southeast of the Project Area. By 1968, both commercial/industrial and residential buildings had been developed near the Project Area; the residential developments are located northeast and southeast of the Project Area. In the 1973 topographic map, I-680 had been developed east of the Project Area and multiple new buildings have been developed throughout surrounding areas. The 1972, 1982, 1993, and 1999 aerial photographs indicate that the progressive development of commercial/industrial and residential buildings on former agricultural parcels continued to occur over time. Residential subdivision expansions are located east and northeast of the Project Area, while commercial/industrial buildings were developed throughout the surrounding areas. By 1999, only a few of the areas surrounding the Project Area remained undeveloped and in use for agriculture. The site reconnaissance, discussed below in Section 6, indicates that no substantial changes in land use have occurred on adjoining properties since 1999.

4. PREVIOUS ENVIRONMENTAL INVESTIGATIONS

A Hazardous Materials User Study was completed for the Project Area in February 2013 (TRC, 2013). The study used federal and state modeling protocols to analyze the hazardous risk posed to sensitive receptors by the hazardous materials storage, use, generation, and transportation within the Project Area. The resulting information was intended to help guide decisions regarding future land use within the Project Area.

After reviewing public records for information on chemicals of concern in the Project Area, eleven sources in the Project Area with the most likely problematic hazardous materials risks were selected, including the Pacific Gas and Electric and Chevron Pipeline Company pipelines. Quantitative worst-case release scenarios (no contaminant containment) and alternative release scenarios were modeled.

Worst-case release scenario modeling indicated that there is a potential for releases that could pose a health and safety risk to future sensitive receptors within the Project Area. Although worst-case scenario conditions were judged to be highly unlikely, the study recommended that mitigation measures should be adopted, when feasible, to reduce the risk of consequences to these receptors. The adoption of these mitigation measures would also protect against smaller, and potentially more common, releases.

The mitigation measures recommended for stationary sources included setback distance, flame and blast walls, earthen berms, building orientation, building ventilation system shutdown, and building materials. These same mitigation measures were also recommended for the mitigation of potential pipeline release effects. Other measures recommended specifically to address pipeline release effects included mitigating site design, elimination of ignition sources, installation of leak monitoring and alarms systems, and installation of automatic shut-off valves. Additionally, the probability of a pipeline release could be reduced by requesting more frequent and rigorous safety testing, installing better signage, providing right-of-way encroachment protection, and reducing pipeline operating pressure. City of Fremont enforcement of existing regulations and collaboration with businesses to improve operating procedures was recommended to reduce the probability of release from all evaluated sources.

5. ENVIRONMENTAL DATABASE REVIEW

BASELINE contacted EDR, a third-party vendor specializing in retrieval of environmental records, to conduct a search of environmental records from federal, state, and local databases pertaining to past and present hazardous materials use and/or release at the Project Area and on properties within the search distances specified by the ASTM Standard. The entire database report was reviewed, and those properties with known or suspected hazardous materials releases were further evaluated to determine whether contamination from those properties would have the potential to affect the Project Area. Additional sites of potential concern were identified using the State Water Resources Control Board Geotracker online database (SWRCB, 2013). Factors used to assess a property's potential effect included: distance from the Project Area, known or presumed direction of surface and groundwater flow, and type and magnitude of release. These properties included:

- **Hazardous Materials Use Sites.** These sites transport, use, store, and/or dispose of hazardous materials.
- **Hazardous Materials Incident Sites.** These sites have reported a one-time release of hazardous materials, generally due to an accident or equipment failure.
- **Hazardous Materials Release Sites.** These sites have documented soil and/or groundwater contamination.

A total of 305 sites associated with hazardous materials use and/or release and located on or near the Project Area were identified by EDR and/or Geotracker. The total number of properties listed in each federal, state, and local database, and the number of properties

located on versus near the Project Area are summarized in Table 2. Further information on each site is provided in Table 3 and approximate site locations are shown on Figure 2. The complete EDR environmental database report is included in Appendix B.

5.1. Hazardous Materials Transportation, Use, Storage, and/or Disposal

Two hundred eighty-one sites were listed on hazardous materials transportation, use, storage, and/or disposal databases (Table 3). Several of these sites have hazardous materials regulation violations, which could indicate improper storage or handling of hazardous materials. Five of the 27 sites with tiered hazardous waste permits in the Department of Substances Control (“DTSC”) database had reported violations (Table 3). Two of the 77 sites listed in the Small Quantity Generator (“SQG”) database, and nine of the 25 sites listed in the Large Quantity Generator (“LQG”) database had reported violations (Table 2). Both of the Treatment Storage and Disposal Facility (“TSD”) reported violations. In addition, the Pacific Commons site (Map ID 42 on Figure 2 and Table 3) was listed in the Enforcement Action Listing (“ENF”) database, which summarizes Regional Water Quality Control Board (“Regional Water Board”) enforcement actions, for failure to submit reports required under the Construction General Permit for stormwater. Based on review of information from the environmental database report, none of the reported violations would have resulted in releases of hazardous materials with the potential to affect the Project Area.

5.2. Hazardous Materials Incident Sites

Eighteen sites were listed on hazardous materials incident databases (Table 2). The Emergency Response Notification System (“ERNS”), California Hazardous Material Incident Report System (“CHMIRS”), and Hazardous Materials Information Reporting System (“HMIRS”) databases describe hazardous materials release incidents to which emergency personnel responded. As noted in Table 3, most of these incidents involve small quantities of hazardous materials that were noticed and cleaned up immediately after reporting. As none of the releases resulted in follow-up investigation or regulatory oversight, according to information from the environmental database report, it is unlikely that the spills at these sites would significantly affect soil or groundwater in the Project Area.

5.3. Hazardous Materials Release Sites

5.3.1. Leaking Underground Storage Tank (“LUST”) Sites

Regional Water Board records included 30 properties on or near the Project Area with releases from leaking underground petroleum storage tanks (Table 3 and Figure 2). Sixteen of these sites have been closed, indicating that remediation was completed or was not necessary. Of fourteen active cases, eight are located in the Project Area. Available case files for the remaining 14 active cases were reviewed using the Geotracker database.

In addition, seven properties were listed on the Hazardous Waste and Substance Site List (“HIST CORTESE”) database, one of which was located in the Project Area (Table 3). The HIST CORTESE listing indicates that these properties are former leaking underground storage tank sites. As no

records on these sites were available on County or Regional Water Board databases, it is assumed that these sites have been closed.

5.3.1.1. Project Area

The Kelly's Concrete site (Map ID 8 on Figure 2 and Table 3) reported a release of diesel in 1987. Contaminated soil and groundwater was removed in 1999, and a 2004 sample showed diesel concentrations were below the laboratory detection limit. A 2012 letter indicates that site clean-up is considered satisfactory, but that the regulatory agency is waiting on well destruction to close the case.

Releases of diesel and gasoline were reported in 1990 and 1994, respectively, at the Bay-Con Inc. site (Map ID 11 on Figure 2 and Table 3). Although contaminated soil was excavated, no remediation of contaminated groundwater has been carried out. Additional investigation is taking place to characterize the extent of the soil and groundwater contamination and the potential for vapor intrusion. The extent of contamination at this site has not been fully delineated.

A release of gasoline was reported at the Clinton Heating and Air Conditioning site (Map ID 11 on Figure 2 and Table 3) in 1993. The most recent groundwater monitoring data, from June 2012, indicated total petroleum hydrocarbons as gasoline ("TPH-g") and benzene, toluene, ethylbenzene, and xylene ("BTEX," volatile organic compounds associated with gasoline) were present in the groundwater, with maximum concentrations of 2,000, 15, 4.3, 140, and 113 micrograms per liter ($\mu\text{g/L}$), respectively. The site is currently under consideration for case closure.

The Dirty Dunbar Service Station (Map ID 22 on Figure 2 and Table 3) reported a release of gasoline in 1983. Remediation activities at the site have included soil vapor extraction/air sparging, free product removal, and soil excavation. The maximum TPH-g and BTEX concentrations in groundwater reported for the March 2011 sampling event were 140, 16, 0.90, 1.4, and 3.5 $\mu\text{g/L}$, respectively. Further remedial action has been requested by the regulatory oversight agency.

A release of gasoline was reported at the Cal-West Concrete Cutting/Olympic Screen Crafts site (Map ID 35 on Figure 2 and Table 3). The case oversight agency has requested additional investigation and remedial action at this site. Historical highs of TPH-g and benzene in off-site well MW-3 are 14,000 and 2,000 $\mu\text{g/L}$, respectively.

A release of gasoline was reported at the Pacific Bell site (Map ID 35 on Figure 2 and Table 3) in 1987. Soil excavation and pump & treat of groundwater were carried out in 1997. Request for closure was denied in 2010 due to elevated levels of TPH-g, BTEX, and methyl tert butyl ether ("MTBE", a gasoline additive) in soil and groundwater samples. In December 2008, TPH-g and MTBE were identified in groundwater at maximum concentrations of 3,000 and 5.1 $\mu\text{g/L}$, respectively.

A release of total petroleum hydrocarbons as diesel (“TPH-d”) was reported at the Pacific Motor Trucking Co. site (Map ID 39 on Figure 2 and Table 3) in 1989. Remediation activities at the site have included free product removal and groundwater extraction and treatment. In March 2013, TPH-d and MTBE were detected in groundwater at maximum concentrations of 6,500 and 39 µg/L, respectively.

The Regional Water Board has established Environmental Screening Levels (“ESLs”) for many contaminants. ESLs are conservative, risk-based concentrations that can be used to screen data to determine if further investigation or remedial action may be warranted. The concentrations of contaminants reported at sites described above, generally exceed the Tier 1 ESL criteria (the most conservative ESLs), and therefore could indicate the presence of contamination at those sites incompatible with sensitive land uses. In addition, it should be noted that even the release cases that are closed could have residual contamination left in place that may not be compatible for sensitive land uses and receptors

5.3.1.2. Surrounding Area

The Shell Oil Service Station/Fast Food Restaurant site (Map ID 3 on Figure 2 and Table 3) reported a release of gasoline in 2009. Monitoring and investigation of the site are ongoing, and the primary contaminant of concern is MTBE in groundwater. MTBE was detected at a maximum concentration of 1,100 µg/L during the April 2013 quarterly monitoring event. This property is located 800 feet north of the eastern portion of the Project Area and groundwater flow is predominantly to the west and southwest; therefore, contaminants from this site could have the potential to migrate via groundwater and affect the Project Area.

A release of gasoline was discovered at the U-Haul site (Map ID 27 on Figure 2 and Table 3) in 1988. Remediation has been conducted through excavation and through the application of oxygen releasing compounds, which is currently ongoing. During the Dec 2012 monitoring event, the maximum concentrations of TPH-g, benzene, and MTBE in groundwater were 73, 12, and 210 µg/L, respectively. This property is located immediately adjacent to and west of the Project Area and groundwater flow is to the south and southeast; therefore, contaminants from this site could have the potential to migrate via groundwater and affect the Project Area.

A release of gasoline was discovered at the Exxon Service Station site (Map ID 4 on Figure 2 and Table 3) in 1988. Free product removal, excavation, and pump & treat of groundwater have taken place, and the site is currently under verification monitoring. As this property is located approximately one-half mile northwest, and hydraulically crossgradient, of the Project Area, it does not likely have the potential to affect the Project Area.

The Valero/Exxon service station (Map ID 56 on Figure 2 and Table 3) reported a release of gasoline in 1988. Remediation activities at the site have included soil excavation soil vapor extraction, and pump & treat of groundwater. A request for closure was submitted in July 2012. The property is located 1,100 feet east of the southeast corner of the Project Area and groundwater flow is to the predominantly to the southwest. Due to the distance from the

Project Area and predominantly crossgradient groundwater flow, this property does not likely have the potential to affect the Project Area.

The Mobile/Oil/BP/Tosco/76 service station (Map ID 61 on Figure 2 and Table 3) reported releases of waste oil in 1987 and of gasoline in 1999. Groundwater monitoring shows that the TPH-g and BTEX contaminant plume does not extend off-site. Furthermore, this property is located about 300 feet south and hydraulically cross gradient, of the Project Area. Therefore, this property does not likely have the potential to affect the Project Area.

The Union Oil/ Unocal 76 service station (Map ID 65 on Figure 2 and Table 3) reported a release of gasoline in 1985. TPH-g, TPH-d, BTEX, and MTBE have been reported at elevated concentrations in the groundwater. No remediation has been performed; however, off-site contamination is not suspected. As this property is located 1,200 feet south, and hydraulically crossgradient, of the Project Area, it does not likely have the potential to affect the Project Area.

A release of gasoline and waste oil was discovered at the Fremont U.S.D. Warm Springs Grammar site (Map ID 75 on Figure 2 and Table 3) in 2000. Soil excavation took place in 2000 and case closure review occurred in 2010, but case closure has not yet been granted. As this property is located 3,000 feet south, and hydraulically crossgradient, of the Project Area, it does not likely have the potential to affect the Project Area.

5.3.2. Spills, Leaks, Investigations, and Cleanup (“SLIC”) Sites

Regional Water Board records reviewed included 13 properties at and near the Project Area in the Spills, Leaks, Investigations, and Cleanups (“SLIC”) program (Table 3 and Figure 2). The SLIC program oversees sites with groundwater contamination not associated with petroleum tanks. Eight of these sites have been closed, indicating that remediation was completed or was not necessary. Of the five active cases, two are located in the Project Area. Online files for all five active cases were reviewed using the Geotracker database.

As with other hazardous materials release sites in the Project Area, residual contamination may be present even at sites that are closed. For example, although the Chrisp Co. site (Map ID 1 on Figure 2 and Table 3) was closed in 2011, a deed restriction was placed on the site due to elevated petroleum hydrocarbon and MTBE concentrations in the groundwater. Future redevelopment activities may need to consider the effect of residual contamination for specific land uses. At the Russet Diesel Service Inc. site (Map ID 44 on Figure 2 and Table 3) petroleum hydrocarbon contamination remain in the soil because access to an area located above shallow underground utilities and near railroad tracks was not feasible at the time of remediation. The case was closed on 9 December 2004 with the requirement that remediation be conducted when access to the area becomes feasible.

5.3.2.1. Project Area

A locomotive derailment on the Southern Pacific Warm Springs Railyard (Map ID 34 on Figure 2 and Table 3) occurred in May 1993 and resulted in a spill of 500-gallons of diesel. Verification

monitoring has been occurring since 2003. Results of the groundwater monitoring event conducted in 2012 show that TPH-d, kerosene, BTEX, and MTBE concentrations do not exceed their respective ESLs. A request for case closure has been submitted.

Groundwater contamination was discovered at the Tesla Motors, Inc. site (Map ID 48 on Figure 2 and Table 3) in 1985. The groundwater is impacted by elevated levels of petroleum hydrocarbons, BTEX, MTBE, SVOCs, other volatile organic compounds (“VOCs”), and arsenic. A groundwater extraction system is operating and quarterly monitoring is being conducted. The contaminant plume's vertical and horizontal extent is in the process of being delineated.

5.3.2.2. Surrounding Area

In 1999, the Regional Water Board determined that VOC plume likely extends from the Warm Springs Cleaners/Star Cleaners site (Map ID 56 on Figure 2 and Table 3) to several properties located in the Project Area (440-1055 Mission Court). This property therefore has been identified by the Regional Water Board to have the potential to affect the Project Area.

Natural attenuation of VOCs in groundwater was approved as a remedy for the JC Information Systems, Inc. site (Map ID 19 on Figure 2 and Table 3). Volatile organic compounds were detected at low concentrations in 2012 and a request for case closure was submitted to the regulatory agency. As this property is located 1,800 feet northwest, and crossgradient, of the Project Area, it does not likely have the potential to impact the Project Area.

Interim remedial actions were initiated at the Baccarat/Fremont-Cushing Plaza Project Area (Map ID 64 on Figure 2 and Table 3) in 2011. The remediation was required by the regulatory agency because the potential for sediments from the site to impact nearby wetlands. The property is located 700 feet west, and hydraulically downgradient, of the Project Area and does not likely have the potential to impact the Project Area.

5.4. Other Hazardous Materials Release Sites in Project Area

The Tesla Factory site (Map ID 48 on Figure 2 and Table 3) is listed on the EPA’s No Further Remedial Action Planned (“NFRAP”) database, which indicates that a site assessment has been completed and that the site will not be included on the National Priority List. The Tesla Factory site is also listed under the CORRACTS database which indicates the completion of a Resource Conservation and Recovery Act (“RCRA”) corrective action activity. In 2005, DTSC issued a "Corrective Action Completion Determination" letter

Three sites are included in the HWP database, which lists permitted hazardous waste facilities with corrective actions. The Tesla Factory and ATG, Inc. (Map ID 84 on Figure 2 and Table 3) sites were closed in 1984 and 2001, respectively. The CTS Printex, Inc. site (Map ID 77 on Figure 2 and Table 3) is listed as having obtained protective filer status in 1988. No records were available on County or Regional Water Board databases that could provide further information about the sites.

The BART Warm Springs Extension site (Map ID 29 on Figure 2 and Table 3) is included in the DTSC Voluntary Cleanup Program (“VCP”) database, which contains properties which have requested DTSC oversight of investigation and/or cleanup activities. The BART Warm Springs Extension site is a former railroad line that operated from around 1906 to 2008. The portion of the BART corridor that is the subject of the VCP consists of an approximately 4-mile long corridor extending from the existing Fremont Station to the proposed location of the Warm Springs Station south of Grimmer Boulevard in Fremont, California. Site investigations along the extension alignment identified the presence of elevated concentrations of arsenic, lead, and the benzo(a)pyrene in shallow soil. A removal action work plan was approved in 2011. Soil remediation began in 2012 and consisted of the removal of ballast and underlying fill soils associated with the former UPRR tracks.

Two sites were listed as containing illegal drug lab materials on the Clandestine Drug Labs (“CDL”) database maintained by the U.S. Department of Justice. No records were available on County or Regional Water Board databases that could provide further information about the sites. As no follow-up remedial action was noted, it is assumed that any releases were cleaned up at the time of discovery or were not significant.

5.5. Orphan Sites

The EDR report included an orphan summary (Appendix B), which contained sites with known hazardous materials use and/or release, but with poor or inadequate address information. These sites could affect conditions at the Project Area depending on the orphan sites’ location and nature of the contamination. The orphan sites were evaluated to determine whether they could be proximate to the Project Area and potentially affect conditions at the Project Area.

The orphan summary listed 46 sites with site name and database information, and without exact addresses. Five of these sites were included in the discussion above (Pacific Commons – Map ID 42; Minuteman Press – Map ID 62; Weibel Vineyards – Map ID 86; Warm Springs LLC – Map ID 81; BART Warm Springs Extension – Map ID 29). None of the remaining sites were identified at or adjacent to the Project Area during the site reconnaissance, and the address information provided did not indicate proximity to the Project Area; therefore, these orphan sites are not considered to have the potential to affect the Project Area.

6. CURRENT LAND USES AND SITE RECONNAISSANCE

Current land uses within the Project Area were determined by a site reconnaissance performed by Monika Krupa, Environmental Scientist with BASELINE, on 29 May 2013. The site reconnaissance was conducted to document current land uses and identify evidence of the storage, generation, release, and/or disposal of hazardous materials in the Project Area and adjoining areas. Evidence of hazardous materials release could include apparent odors, stained or discolored surfaces, and stressed or damaged vegetation. A windshield site reconnaissance was conducted for the entire Project Area, and select areas of concern were observed while walking along public rights-of-way.

The Project Area contained primarily industrial and light industrial land use, but office, agricultural, and commercial land uses were also observed. The adjoining areas had a similar land use pattern except that agricultural land uses were not observed. Additionally, construction activities associated with the South Fremont BART Station were observed southwest of the intersection of Warm Springs Boulevard and South Grimmer Boulevard (Figure 3). Construction activities were also observed along multiple areas near the railroad tracks and along Mission Boulevard. No stained soil, stunted vegetation, odors, or other evidence of hazardous materials release were observed from public rights-of-way during the site reconnaissance. However, observations made during reconnaissance of the Project Area and adjoining properties identified 119 sites with evidence of possible hazardous materials use (Figure 3). These sites have been grouped into general categories and their names and addresses are listed in Table 4. Typical hazardous materials uses associated with each category, and observations of certain sites within each category, are described below:

- **Agricultural / Landscaping.** The hazardous materials associated with this category are herbicides, pesticides, and fertilizers that are applied to agricultural fields and to landscaped areas. Additionally, equipment storage areas observed on some of the fields and on the landscaping business properties may involve the use of solvents, lubricants, and fuels. A strong organic odor, as of compost or fertilizer, was observed at the Land Services facility.
- **Construction / Equipment servicing.** This category includes concrete companies, air conditioner installation and maintenance, and industrial machine servicing. The hazardous materials associated with this category are refrigerants, coolants, and fuels, and maintenance chemicals such as solvents and lubricants. Lumber and construction equipment were observed in the paved yard of Roof Structures Inc. Vats were observed in the partially paved yard of Kelly's Concrete and Building Materials. The Lopez Roofing lot was unpaved and roofing tiles, vehicles, an oil waste can, and several portable storage containers were observed on the lot. Containers used for the transportation of liquids via trucks were observed behind the Pacific Surfacing building. Construction equipment was observed stored on a partially paved lot at Sunstate Equipment Rentals. Several 55-gallon drums were observed in the unpaved storage area located at 2000 Prune Avenue. A stockpile of large bags filled with unknown material was observed behind the ERS Industrial Services building. Several 55-gallon drums were visible inside of the Image Precision Machine building.
- **Entertainment.** The hockey rink observed in the Project Area may use and store refrigerants, and the go-karting facility observed adjacent to the Project Area is likely to store chemicals used for go-kart maintenance, such as fuels and lubricants.
- **Light industry / Commercial.** Many of the properties observed in this category did not have signs indicating a company name, but did have placards indicating the presence of hazardous materials. All of the unidentified companies observed were located in light

industrial complexes. The hazardous materials associated with both light industrial and commercial use could involve a wide range of organic and inorganic chemicals.

- **Machining / Material fabrication / Technology Manufacturing.** The hazardous materials associated with this category may be metals, acid and alkaline solutions, solvents, lubricants, and fuels. All of these materials could be associated with the Tesla Factory, which manufactures automobiles, although most of the manufacturing facilities observed were computer technology manufactures. Gas cylinders, lumber, and rebar were observed in the yard of PJ's Building Materials & Rebar Fabrication. A liquid hydrogen above ground storage tank ("AST") was observed outside of the Hayward Quartz building.
- **Materials storage and transport.** The hazardous materials associated with this category may be fuels used in transporting materials. Quality Transport, which transports bulk materials, had facilities at two different locations. The facility located within the Project Area was a railyard containing railroad cars used for transporting liquids. The facility also contained a large unpaved area on which bulk construction materials, such as rebar, were stored.
- **R&D ("Research and Development") / Laboratory supply.** The R&D facilities observed were primarily in the technology sector. The hazardous materials associated with this category may be acids, solvents, lubricants, and metals. Additionally, laboratory supply companies handle a variety of hazardous chemicals. Signs indicating the storage of liquid nitrogen and diesel fuel were observed on the Western Digital facility located at 1250 Reliance Way. A diesel fuel AST was observed outside of the XO Communications building.
- **Vehicle repair shops / Vehicle storage lots / Gas stations.** The hazardous materials associated with this category may be fuels, lubricants, solvents, and paints. The U-Haul parking area was fully paved, while the Fremont Vehicle Storage appeared mostly unpaved. Only one gas station was observed in the Project Area.

7. OTHER ENVIRONMENTAL CONCERNS

7.1. Railroads

The Union Pacific Rail Corridor runs approximately north to south across the Project Area (Figure 3). The railroad tracks have been present at the Project Area since at least 1939 (Table 1). Chemicals associated with historical railroad operations are commonly found along railroad right-of-ways. According to the DTSC, the most commonly reported contaminants are metals, pesticides, polychlorinated biphenyls ("PCBs"), and petroleum hydrocarbons (DTSC, 2006). Potential chemicals and their sources that could be found anywhere along the railroad corridor may include the following:

- Arsenic from railroad tie preservatives and weed-control sprays (such as lead arsenate);

- Phenol and creosol from railroad ties;
- Diesel and motor oil dripped from trains;
- Pesticides from railroad right-of-way maintenance;
- Metals from slag potentially used as railroad bed fill;
- PCBs formerly used in hydraulic fluid; and
- Polynuclear Aromatic hydrocarbons (“PAHs”) from diesel exhaust.

7.2. Petroleum Pipelines

Two underground petroleum pipelines are located along the Union Pacific Rail Corridor right-of-way adjacent to the Tesla Factory (Figure 3) (Pipeline and Hazardous Materials Safety Administration, 2013). One pipeline, operated by Chevron Pipe Line Company, turns east along South Grimmer Boulevard. The other pipeline, operated by Santa Fe Pacific Pipeline, L.P., continues to run north along the Union Pacific Rail Corridor right-of-way. Pipelines have been subject to pipeline safety and maintenance regulations since 1979, including the Federal Hazardous Liquid Pipeline Safety Act (Title 49, Code of Federal Regulations, Part 195.412) and state regulations (California Government Code Section 51010-51019.1). These regulations require that petroleum pipelines be designed with equipment, such as low-pressure alarms and safety shut-down devices, to minimize spill volume in the event of a leak. The regulations also require that a pipeline management plan, with additional inspection safety and reporting requirements, be prepared for “environmentally sensitive pipelines,” which include pipelines located within 300 feet of any residential areas. While implementation of pipeline safety regulations minimizes potential impacts associated with future releases of petroleum (if any), they do not remove the potential for historical releases from the pipelines. Although no evidence of significant releases was noted during the site reconnaissance, there may be a potential for releases to have occurred prior to implementation of current regulatory requirements. Contaminants of concern from petroleum pipelines include gasoline, diesel, and jet fuel, as well as MTBE, BTEX, and PAHs.

7.3. Current and Historical Use of Pesticides on Agricultural Properties

In 1939, agriculture was the dominant land use in the Project Area, and although the Project Area has gradually been developed for primarily industrial and light industrial use, agricultural land use is still present in the Project Area (Figure 3). As a result of the current and historical agricultural land use, pesticide and herbicide residues may be present in shallow soils at the Project Area. The historical use of pesticides is of particular concern because prior to 1950, inorganic pesticides that contained elevated concentrations of heavy metals, such as arsenic, were commonly used in California agriculture. After 1950, organochlorine pesticides were commonly used in California agriculture until about the mid-1970s. Arsenic from inorganic pesticides and residues from organochlorine pesticides used in the past have the potential to

persist for many decades in shallow soils and can affect human health and the environment (DTSC, 2008).

7.4. Hazardous Materials in Structures and Transformers

Hazardous concentrations of lead, which is a state-recognized carcinogen (OEHHA, 2012), may be present on the surface of painted structures in the Project Area, as well as in shallow soils surrounding the painted structures. Prior to 1978, lead compounds were commonly used in interior and exterior paints.

The EPA banned various asbestos-containing products from 1973 through 1989. In 1989 the “Asbestos Ban and Phaseout Rule” was issued; however, in 1991 this regulation was overturned, and as a result only a few asbestos-containing products still remain banned (EPA, 2013). Although its use has declined since 1989, asbestos may still be found in roofing and flooring materials on structures and insulation on utility lines. The Code of Federal Regulations National Emissions Standards for Hazardous Air Pollutants (“NESHAP”) classifies and regulates material containing more than 1 percent asbestos (40 CFR, Part 61, Subpart M). Activities that disturb materials containing any amount of asbestos are subject to certain requirements of the California Occupational Safety and Health Administration (“CalOSHA”) asbestos standard (CCR Title 8, Section 1529). If asbestos-containing material (“ACM”) is present in structures in the Project Area, a trained asbestos specialist is required to be present when the ACM is stripped, removed, or disturbed.

PCBs have historically been used in electrical transformer dielectric fluids. In 1979, the EPA issued regulations banning the production of PCBs and phasing out their use. However, the development of the Project Area had begun by 1961 and transformers containing PCBs would likely have been installed in the Project Area prior to 1979. Therefore, PCBs could be present within the Project Area.

7.5. Aerially Deposited Lead

Lead alkyl compounds were first added to gasoline in the 1920s. Beginning in 1973, the EPA ordered a gradual phase out of lead from gasoline that significantly reduced the prevalence of leaded gasoline by the mid-1980s. Prior to the 1970s, the EPA estimated that vehicles emitted approximately 75 percent of the lead consumed in leaded gasoline as particulate matter in the exhaust (DTSC, 2004). As a result, shallow soils within approximately 30 feet of the edge of pavement on heavily trafficked roadways have the potential to be contaminated with aerially deposited lead (“ADL”) from historical car emissions prior to the elimination of lead in gasoline (DTSC, 2009).

Based on a review of historical topographic maps, the I-880 highway was constructed by 1961, before the phase-out of lead in gasoline, and the I-680 highway was constructed by 1973, around the time the phase-out of lead in gasoline began. Therefore, exposed shallow soils at the Project Area within approximately 30 feet of the I-880 highway, and to a lesser extent of the I-680 highway, could be contaminated with ADL.

7.6. Naturally-Occurring Asbestos

Geologic mapping from the United States Geological Survey does not show any areas of rock likely to contain naturally-occurring asbestos (ultramafic rock) at the Project Area (Van Gosen, B.S., and J.P. Clinkenbeard, 2011). Therefore, naturally-occurring asbestos in native bedrock at the Project Area would not be expected to be a potential hazard during development of the Project Area.

8. DATA GAPS

The ASTM Standard Method E1527-05 requires the identification of data gaps and a discussion of the significance of the identified data gaps. Information sources at intervals greater than five years between sources from the present to 1940 or the first developed land use, whichever is earlier, can be considered a data gap. In addition, the inability to obtain information required by the ASTM Standard (i.e., site reconnaissance or interview with the owner/key site manager) may constitute a data gap.

Historical land use records for the Project Area were available from 1939 through 2012 (Appendix A). Although historical land use records were not available at intervals equal to or less than five years, the longer intervals do not constitute a data gap because sufficient records were available to establish the progressive development of the Project Area from agricultural to primarily industrial and light industrial land use.

No data gaps were identified from information obtained for this Phase I ESA. The information reviewed for this Phase I ESA was adequate for identifying RECs at the Project Area or at properties in the surrounding area.

9. ASTM E1527-05 DEVIATIONS

The purpose of this Phase I ESA was not to qualify for landowner liability protections associated with commercial real estate transactions under the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"). As a result, the following deviations from ASTM E1527-05, which are intended to meet or exceed the federal requirements for landowner liability protections under CERCLA, do not have a significant effect on the findings or conclusions of this ISA:

- The Project Area consists of numerous parcels and instead of a single parcel, as assumed in ASTM E1527-05, therefore a title search to identify potential environmental liens and activity and use limitations associated with commercial parcels was not conducted.
- Due to the large number of parcels, interviews with past, present, and prospective owners or operators who are likely to have material information regarding the potential for contamination at the Project Area were not conducted.
- Interviews with state or local government officials regarding the potential for contamination in the Project Area and vicinity were not conducted, because any

information obtained would likely duplicate information already reviewed from federal, state, and local regulatory agency records.

10. FINDINGS

BASELINE has performed a Phase I ESA in conformance with the scope and limitations of the ASTM Standard Method E1527-05 for the proposed Warm Springs South Fremont Community Plan and EIR Project in Fremont, California. Any exceptions to, or deviations from, these standards are described in Section 9 of this report. This Phase I ESA has identified the following known and potential sources of hazardous materials contamination that could impact soils and/or groundwater beneath the Project Area. :

- **Hazardous materials releases**

A review of regulatory agency records indicates that there were 51 sites with documented soil and/or groundwater contamination located within or near the Project Area (Figure 2; Table 3). Nineteen of these sites are active cases.

- **Current and historical industrial and light industrial land use**

A review of historical aerial photographs and topographic maps shows that industrial and light industrial buildings had been developed in the Project Area by 1961 (Table 1). During the site reconnaissance it was observed that the Project Area contains primarily industrial and light industrial land uses (Table 4). Observations of the Project Area and its adjoining properties identified 119 sites with evidence of hazardous material use (Table 3). Two hundred eighty-one sites were listed on hazardous materials transportation, use, storage, and/or disposal regulatory agency records. The widespread current and historical use of hazardous materials on and surrounding the Project Area indicates that there is a potential for undocumented hazardous materials releases to be present within the Project Area.

- **Current and historical agricultural land use**

A review of historical aerial photographs and topographic maps shows that the Project Area and the surrounding areas were being used for agriculture by 1939 (Table 1). Residues from historical and current pesticide and herbicide use could potentially be present in shallow soils within the Project Area. Historical pesticide use is of particular concern because arsenic from inorganic pesticides and residues from organochlorine pesticides used in the past have the potential to persist for many decades in shallow soil.

- **Railroads**

The Union Pacific Rail Corridor runs approximately north to south across the Project Area (Figure 3). The railroad tracks have been present at the Project Area since at least

1939 (Table 1). Chemicals associated with historical railroad operations are commonly found along railroad right-of-ways. The most frequently reported contaminants are metals, including arsenic, pesticides, PCBs, and constituents of petroleum hydrocarbons.

- **Pipelines**

Two underground petroleum pipelines are located along the Union Pacific Rail Corridor right-of-way adjacent to the Tesla Factory (Figure 3). One pipeline, operated by Chevron Pipe Line Company, turns east along South Grimmer Boulevard. The other pipeline, operated by Santa Fe Pacific Pipeline, L.P., continues to run north along the Union Pacific Rail Corridor right-of-way. Contaminants of concern from petroleum pipelines include gasoline, diesel, and jet fuel, as well as BTEX and PAHs.

- **Aerially-Deposited Lead**

Exposed shallow soils in the Project Area within approximately 30 feet of the edge of major roadways, including I-880 and I-680, could be contaminated with ADL from historical vehicle emissions.

- **Hazardous materials in structures and transformers**

Based on the age of buildings in the Project Area, asbestos-containing material and lead-based paint may be present. Transformers containing PCBs may also be present. The disturbance of these structures and transformers as a result of future development could release hazardous materials during construction activities, which could pose a risk to human health and the environment during Project activities.

11. CONCLUSIONS

We have performed this Phase I ESA in conformance with the scope and limitations of the ASTM Standard Method E1527-05 for the Project Area. Any exceptions to, or deviations from, this practice are described in Section 9 of this report. This assessment has revealed the following RECs and related environmental concerns in connection with the Project Area:

- Sites with documented soil and/or groundwater contamination located throughout the Project Area;
- Current and historical industrial and light industrial land use associated with the use of a wide variety of hazardous materials;
- Railroad right-of-ways which may be associated with releases of metals such as arsenic, pesticides, PCBs, and petroleum hydrocarbons;
- Petroleum pipelines which may be associated with releases of petroleum products, as well as BTEX and PAHs;

- Pesticide and herbicide residues in shallow soils from current and historical agricultural uses, including arsenic from inorganic pesticides and organochlorine pesticides;
- ADL in exposed shallow soils adjacent to the I-880 and I-680 highways from historical vehicle emissions; and
- Lead-based paint and asbestos-containing materials in existing structures, and transformers containing PCBs.

12. RECOMMENDATIONS

Due to the potential presence of hazardous materials releases from current and historical land uses, as well as the documented releases of hazardous materials in and near the Project Area, a parcel-specific Phase I site assessment should be conducted prior to the redevelopment of any of the parcels within the Project Area. The parcel-specific Phase I assessment should rely on the research and findings of this Phase I site assessment to the extent practical. Based on the findings of the parcel-specific Phase I site assessment and proposed future land uses of the parcel, additional investigation, including soil, groundwater, and/or soil gas sampling, may be warranted.

13. ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312 and we have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The qualifications of the document preparers are provided in Appendix D.

14. LIMITATIONS

This Phase I ESA was performed to provide an understanding of the current environmental conditions at the Project Area. BASELINE's interpretations and conclusions regarding this information and presented in this report are based on the expertise and experience of BASELINE in conducting similar assessments and current local, state, and federal regulations and standards.

BASELINE's objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental, and engineering consulting professionals, in accordance with the standard for professional services for a consulting firm at the time these services were provided. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, BASELINE cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is

included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the Project Area, analysis of the data, and re-evaluation of the findings, observations, conclusions, and recommendations expressed in this report.

The findings, observations, conclusions, and recommendations expressed by BASELINE in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the Project Area with any federal, state, or local law or regulation. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

TABLES

**TABLE 1: Summary of Historical Land Uses at the Project Area and Surrounding Areas
Fremont Warm Springs Community Plan Area, Fremont, California**

Historical Resource	Project Site	Surrounding Areas
1939 Aerial Photograph	Agricultural land uses. Southern Pacific and Western Pacific railroad tracks, mapped on the first available topographic maps from 1953, run north to south across the Project Area	Agricultural land uses.
1946 Aerial Photograph (northeast portion of site) 1949 Aerial Photograph (western and southern portions of site)	Agricultural land uses. Southern Pacific and Western Pacific railroad tracks, mapped on the first available topographic maps from 1953, run north to south across the Project Area.	Agricultural land uses.
1953 Topographic Map	Several orchards are located on the eastern portion of the Project Area. The intermittent stream Agua Caliente passes through the southern portion of the Project Area from the east and ends within the Project Area. The Southern Pacific and Western Pacific railroads run north to south across the Project Area.	Several orchards are located east of the Project Site. The intermittent stream Agua Fria runs south of the Project Site. The channelized creek Canada del Aliso runs east to west and ends north of the Project Site.
1956 Aerial Photograph	Agricultural land uses. Southern Pacific and Western Pacific railroad tracks, mapped on the first available topographic maps from 1953, run north to south across the Project Area	Agricultural land uses.
1961 Topographic Map	Multiple new commercial/industrial buildings, primarily in the northwest, are located within the Project Area. One orchard on the eastern half of the Project Area has been expanded. An unnamed channelized creek runs east to west across the northernmost end of the Project Site before joining the channelized Laguna Creek west of the Project Area.	The I-880 highway has been constructed west of the Project Site. The channelized Laguna Creek is located west of the Project Site and runs southwest. Canada del Aliso has been channelized and joins Laguna Creek west of the Project Site.
1968 Topographic Map	An automobile assembly plant has been constructed within the Project Area and covers most of the southern and western area of the Project Area. A railroad yard runs along the eastern edge of the plant. Multiple new commercial/industrial buildings are located east and west of the automobile assembly plant and in the northern portion of the Project Area. The intermittent stream Agua Caliente is now channelized west of Warm Springs Boulevard and flows into Laguna Creek west of the Project Area.	A golf course is located southeast of the Project Site. Commercial/industrial buildings have been developed in the areas surrounding the Project Site. Residential developments are located northeast and southeast of the Project Site.
1968 Aerial Photograph	A large industrial facility (automobile assembly plant) has been developed on the western portion of the Project Area. Areas immediately north and south of the automobile assembly plant are undeveloped. A railroad yard runs along the eastern edge of the plant. The area east of the railroad yard remains dominated by agricultural land uses. Several commercial/industrial buildings were developed on the northern portion of Project Area.	A residential development has been developed northeast of the Project Site. Several commercial/industrial buildings were developed southeast of the Project Site. Two commercial/industrial buildings were developed southwest of the Project Site. The remaining land use is agricultural.
1973 Topographic Map	Commercial/industrial buildings have been developed within the automobile assembly plant, north of the plant, and east of the railroad yard. A railroad yard has been added north of Grimmer Boulevard.	Multiple commercial/industrial buildings have been developed in the areas surrounding the Project Site, particularly to the north and west of the Project Site. The I-680 highway has been developed east of the Project Site. <u>There are fewer orchards east of the Project Site.</u>
1979 Aerial Photograph	Commercial/industrial buildings have been developed on the western edge of the Project Area. Several commercial/industrial buildings have been developed immediately east of the railroad yard.	The residential development located to the northeast of the Project Site has been expanded. One commercial/industrial building has been developed southeast of the Project Site. <u>Multiple commercial/industrial facilities have been developed west of the Project Site.</u>
1982 Aerial Photograph	Several commercial/industrial buildings have been developed on the eastern portion of the Project Area. Three new commercial/industrial buildings and a construction area are located north of Grimmer Boulevard.	The residential development located to the northeast of the Project Site has been expanded. Several commercial/industrial buildings have been developed directly north of the Project Site. A commercial/industrial building has been developed south of Project Site.
1993 Aerial Photograph	Multiple commercial/industrial buildings have been developed north of Grimmer Boulevard. The railroad yard north of Grimmer Boulevard has been expanded. Additional commercial/industrial buildings have been developed in the area east of the automobile assembly plant and west of Warm Springs Boulevard. The automobile assembly plant has been expanded to the north and east. Portions of the eastern area of the Project Area, and areas directly north and south of the automobile assembly plant, remain undeveloped and are possibly still in use for agriculture.	The residential development located to the northeast of the Project Site has been expanded. A commercial/industrial building is located directly north of the Project Site. The area north of this building is under development. The entire area west of the Project Site and east of the I-880 highway has been developed for commercial/industrial use. Additionally, numerous commercial/industrial buildings have been developed west of the I-880. Areas east and south of the Project Site have been completely developed for predominantly commercial/industrial, and some residential, uses; only an area south of Corporate Way and north of Brown Road remains undeveloped, and possibly still in use for agriculture.
1999 Aerial Photograph	An industrial building has been developed north of Grimmer Boulevard. Four commercial/industrial buildings have been developed along Reliance Way. Previously undeveloped areas near the intersection of Corporate Way and Warm Springs Boulevard now contain commercial/industrial buildings. Undeveloped land possibly still in use for agriculture, is located directly north and south of the automobile assembly plant, and in the area south of Grimmer Boulevard and north of Corporate Way.	Commercial/industrial buildings have been developed north of Auto Mall Parkway and immediately west of the I-680 highway. The previously undeveloped area south of Corporate Way and north of Brown Road has been developed for commercial/industrial uses. Commercial/industrial buildings have been developed in the area southwest of the intersection of Fremont Boulevard and I-880 highway. Multiple commercial/industrial buildings have been developed west of the Project Site.
2012 Aerial Photograph	Several commercial/industrial buildings have been developed at the corner of Research Avenue and Corporate Way. Additionally, several commercial/industrial buildings have been developed south of Skyway Court.	Commercial/industrial buildings have been developed north of Skyway Court, which is located immediately north of the Project Site. Several commercial/industrial buildings have been developed southwest of the I-880 highway.

Note: See Appendix A for historical land use records.

**Table 3: Sites on Regulatory Agency Databases within One Mile of the Project Site
Warm Springs South Fremont Community Plan and EIR Project, Fremont, California**

Map ID	Name	Address	Lists	STATUS
1	Cyantek Corp	3055 Osgood Ct.	DTSC	DTSC Tiered Permit: Several small releases and their cleanup were reported inside the facility on 12/27/1996 and 3/11/1997. A Phase II Environmental Site Assessment completed 8/7/1995 found soil and groundwater contamination on the site. No other information provided.
1	Prudential Overall Supply	3095 Osgood Ct.	HIST CORTESE; SQG; HAZNET	HIST CORTESE: Former leaking underground storage tank site. No records under County or Regional Water Board databases.
1	Chrisp Co	43650 Osgood Rd.	SLIC	SLIC: Site had been used by a highway construction company and for auto repair/painting. Site investigation on 6/4/1987 found petroleum hydrocarbon contamination. Further investigation occurred in 1991 and 2008. No remediation was required. MTBE concentrations ranged from 23-37 µg/L, above the MCL of 13 µg/L, but contamination was limited to a small area (no source identified). Petroleum hydrocarbons were detected above residential ESLs, but below commercial/industrial ESLs. Case closed on 12/8/2011 with deed restriction requiring that development of the site for residential use include further investigation, and remediation, if appropriate; additionally, wells installed on site or in its immediate vicinity are to be tested for MTBE.
2	Raisch Grade Way Construction	43801 Osgood Rd.	LUST; UST; SQG; HAZNET	Two separate LUST cases: Case opened in 1987 when diesel contamination of soil and groundwater was discovered during tank closure. Soil excavation and free product removal took place in 1989. Case closed as of 12/18/1997. Diesel, gasoline, waste oil/motor/hydraulic/lubricating soil contamination was discovered during OM activities. Cause is unknown. Soil excavation took place in 2000. Case closed as of 12/3/2001. No other information provided.
3	Circle K 76/Unocal 7499	2950 Auto Mall Pkwy.	LUST; UST	LUST: MTBE and TPH-d were detected in the groundwater during a due diligence investigation of the site in 2007. Further monitoring showed that the concentrations of these constituents were below ESLs and that the vertical and horizontal extent of the contamination was limited. The case closed on 10/5/2010.
3	Shell Oil Service Station/Fast Food Restaurant	43921 Osgood Rd.	LUST; UST; LQG	LUST: Gasoline and fuel oxygenate contamination was discovered on 3/25/2009. Monitoring and investigation are ongoing. The primary contaminant of concern is elevated MTBE in groundwater. Site is now a Jack-in-the-Box. Case open.
4	Exxon Service Station	43250 Grimmer Blvd.	LUST; HIST UST	LUST: Release of gasoline in soil and groundwater was discovered on 8/23/1988 during tank excavation. Free product removal, excavation, and pump & treat have taken place. Primary contaminant of concern is benzene, whose concentration was 3,300 µg/L in Feb 2013. Verification monitoring as of 11/27/2012.
5	Diruscio Property	43740 Fremont Blvd.	LUST	LUST: Release of gasoline in soil discovered in 9/26/1994. Unspecified cleanup action taken. Case closed on 11/28/1994.
6	Walmart	44009 Osgood Rd.	SQG; HAZNET; AST	-
6	Read-Rite/Western Digital	44100 Osgood Rd.	DTSC; SLIC; CHMIRS; LQG	LQG: Facility received 12 notices of violation in 2010 and 2011 (1 notice in 2003). All have "achieved compliance". Facility cited as a "significant non-complier" in 2011 and as "not a significant non-complier in 2012". Facility handles ignitable, corrosive, and reactive hazardous wastes, waste water sludge's, non-halogenated solvents, cyanide, chromium, arsenic and others. SLIC: Case closed as of 11/17/1994. No other information provided. CHMIRS: 540 gallons of chilled water released into a storm drain on 7/28/2005. DTSC Tiered Permit

8	Kellys Concrete	44300 Old Warm Springs Blvd.	LUST; SQG; HIST UST; HAZNET; CHMIRS	LUST: Release of diesel into soil and groundwater discovered in 1987. Contaminated soil and groundwater was removed from excavation area when the UST was removed in 1999. No diesel detected in last sample taken in 2004. A letter indicates that clean-up efforts were satisfactory, but that the regulatory agency is waiting on monitoring well destruction for case closure.
8	Truck-Rail Handling Inc	44355 Old Warm Springs Blvd.	HMIRS; SQG; AST; HAZNET	HMIRS: Ferric chloride solution was released in the rail yard as a result of a leak from a sump on 9/30/2009. The leak was contained and cleaned up with no contact with soil or groundwater. HMIRS: On 7/12/2012 petroleum distillates leak was found in an deteriorated gasket on a tank car. Fire department responded. Recommended that more thorough inspections of cars take place. HMIRS: On 9/30/2009, ferric chloride solution spilled onto asphalt as a result of lining failure in a railcar. No contact with waterways occurred. Spill was contained and cleaned up. More frequent liner inspections recommended.
8	Sunrise Electronics West/ Tyco Printed Circuit Group/Trend Circuits Inc	44358 Old Warm Springs Blvd.	CHMIRS; DTSC; LQG; HAZNET; TRIS	CHMIRS: On 9/14/2005 100-gallons of tap water leaked into the storm drain system. DTSC Tiered Permit: Two spills to sanitary sewer system occurred in 1980's. Follow up in 1997 indicates no releases from regulated units. TRIS: Lead and copper compounds used in facility.
8	Palimar Corp	44368 Old Warm Springs Blvd.	HIST CORTESE; SQG; HAZNET	HIST CORTESE: Former leaking underground storage tank site. No records under County and Regional Water Board databases.

9	Wickes (Pacific Supply) Lumber	43962 Fremont Blvd.	LUST; HIST UST	LUST: Release of gasoline into soil and groundwater discovered on 10/30/1987 during tank closure. Case closed as of 8/11/1989 following excavation and free product removal.
9	Western Precooling Systems/Glacier Ice Co., Inc.	43978 Fremont Blvd.	LUST; HIST UST	LUST: Gasoline and diesel contamination of soil and groundwater discovered during removal of five USTs in 1987 and 1999. In-situ biological treatment, free product removal, and excavation were carried out in 2000 and 2001. After treatment the only contaminant detected was <5 µg/L MTBE. Case closed as of 4/28/2010. Property is now a Home Depot.
10	West Coast Quartz, Inc.	4010 Business Center	DTSC	DTSC Tiered Permit

**Table 3: Sites on Regulatory Agency Databases within One Mile of the Project Site
Warm Springs South Fremont Community Plan and EIR Project, Fremont, California**

Map ID	Name	Address	Lists	STATUS
11	Bay-Con Inc	2150 Prune Ave.	LUST; HIST UST; SQG; HAZNET	LUST: Contaminated soil was reported following the excavation of a 550-gallon diesel UST in 1990 and a 2,000-gallon gasoline UST in 1994. The soil around the UST pits was excavated, however groundwater was impacted by the release from the gasoline UST. Other than excavation, no other remediation has taken place. Subsequent soil and groundwater investigations were carried out from 1996 through 2012. Ongoing work is taking place to characterize the horizontal and vertical extent of the soil and groundwater contamination, investigate potential vapor intrusion, and prepare a Corrective Action Plan.
11	Dan's Wire Mfg/Fremont Wire &	2156 Prune Ave.	CHMIRS; SQG; HAZNET	CHMIRS: A release occurred on 2/15/1990. No other information provided.
11	Clinton Heating And Air Conditioning	2162 Prune Ave.	LUST; HIST UST	LUST: Soil and groundwater gasoline contamination was discovered during the removal of the 550-gallon UST on 6/9/1993. Contaminated soil was excavated in 1993 and 1995. Soil and groundwater investigations took place in 1997, 2008, and 2011. Though elevated residual petroleum hydrocarbon contaminants (TPH-g, benzene, ethylbenzene, and xylenes) are still present in the soil and groundwater, the site is under consideration for case closure.

27	U-Haul	44511 S Grimmer Blvd.	LUST; HIST UST; HAZNET	LUST: Gasoline and MTBE contamination of soil and groundwater discovered during tank closure on 12/23/1988. Remediation has been conducted through excavation and ongoing oxygen releasing compounds application. During the Dec 2012 monitoring event, the maximum detections of TPH-g, benzene, and MTBE were 73, 12, and 210 µg/L,
28	Global Plating Inc.	44620 S Grimmer Blvd.	DTSC; LQG; HAZNET; TRIS	LQG: Facility received notice of violation on 12/13/2005. Achieved compliance on 1/10/2006. DTSC Tiered Permit. TRIS: Nitric acid is used in facility.
29	BART Warm Springs Extension	Warm Springs Blvd.	VCP	VCP: The site is a former railroad line that operated from around 1906 to 2008. The portion of the BART corridor that is the subject of the VCP consists of an approximately 4-mile long corridor extending from the existing Fremont Station to the proposed location of the Warm Springs Station south of Grimmer Boulevard in Fremont, California. Site investigations along the extension alignment identified the presence of elevated concentrations of arsenic, lead and benzo(a)pyrene in shallow soil. A removal action work plan was approved in June 2011. Excavation began June 2012 and consisted of the removal of ballast and underlying fill soils associated with the former UPRR tracks. All work is completed with the exception of the removal of one soil stockpile, which may be used as fill on the site.

The soil was excavated. ERNS: A fire sprinkler system came on and resulted in the release of 350 gallons of acid/water mixture inside the facility on
44	Freetech Plastics Inc	2211 Warm Springs Ct.	HAZNET	-
46	Hayward Quartz Technology	1700 Corporate Wy.	LQG; HAZNET	LQG: Two violations cited by state inspector: 8/9/2004 (compliance achieved on 9/9/04) and 11/18/2004 during compliance evaluation inspections onsite. No other information provided.
47	Malmberg Engineering Inc	801 Boggs Ave.	RCRA-NONGEN; HAZNET	-
48	Tesla Motors Inc / New United Motor Manufacturing Inc / Dassel's Petroleum Inc (Private filling station) / Toyota Logistics Services Inc	45250, 45500, 45600 Fremont Blvd.	DTSC; CORRACTS; TSDF; LQG; HIST UST; HAZNET; SLIC; CHMIRS; AST; SQG; TSCA; ERNS; HWP; NFRAP; TRIS	Facility is a RCRA-TSDF (facility treats, stores, or disposes of hazardous wastes on-site) and a RCRA-LQG. Facility received 6 notices of violations in 1999 and 1 notice of violation in 2005. Compliance was achieved in all cases. SLIC: Contamination discovered in 1985. Groundwater impacted by elevated levels of petroleum hydrocarbons and halogenated VOCs, BTEX, MTBE, SVOCs, and arsenic. Groundwater extraction system is operating and quarterly monitoring is being conducted. Contaminant plume's vertical and horizontal extent is in the process of being delineated. HWP: Closure verification was issued on 11/27/1984. CHMIRS: On 1/22/1998, 20 gallons of oil was released into a storm drain when container fell off of forklift. It was trapped there, except for a sheen, which was washed away. CHMIRS: On 12/6/1996, a tanker truck caught fire and gas went into drain that leads to a creek. CHMIRS: On 4/29/1998, 100 gallons of 37% hydrochloric acid was spilled when a valve broke on a storage tank. 150 personnel were evacuated. Spill was cleaned up. CHMIRS: On 9/17/1998, 5 gallons of foam went into Laguna Creek, which was boomed. CHMIRS: An described incident occurred on 2/17/1988. CHMIRS: On 4/29/1998, 100-200 gallons of hydrochloric acid was spilled inside the facility. 50 personnel evacuated. CHMIRS: On 9/21/1994, approximately 10 gallons of fuel spilled in fueling area. Most stayed in containment area, some went to asphalt. CHMIRS: On 3/22/2001, approximately 150 gallons of gasoline spilled in containment area due to mechanical failure in transfer system between tanks. About 1 gallon went into storm drain. Spill was cleaned up. TRIS: methyl isobutyl ketone, methanol, n-butyl alcohol, nitrate compounds, benzene, toluene, ethylbenzene, styrene, nickel, zinc compounds, copper, lead, cyclohexane, n-hexane, 1,2,4-Trimethylbenzene, glycol compounds, and ethylene glycol used in facility. DTSC Tiered Permit/CORRACTS: Subject to RCRA. The site was previously owned by General Motors Corporation (GMC). In the early 1960's, GMC, Fremont Plant was constructed and began operations. In the mid-1980's, GMC and Toyota Corporation of Japan formed a joint venture, the New United Motor Manufacturing, Inc. (NUMMI). An Interim Status Document (ISD) was issued on 4/6/1981, to GMC for a surface impoundment, also called Wastewater Lagoon or Wastewater Holding Pond. GMC closed the surface impoundment following an approved closed plan. On 11/27/1984, DTSC issued a letter acknowledging the surface impoundment was officially closed. The RCRA Facility Investigation (RFI) Report for the Sand Blast Grit Disposal Area and the Perin's Shop Concrete Sump was completed in 2/9/2001. Based on DTSC's technical review of RFI Report, DTSC concurred that the levels of hazardous constituents in soil and groundwater did not pose risks to the environment. DTSC approved the RFI Report on 5/24/2001. On 3/9/2005, DTSC issued "Corrective Action Completion Determination" letter for those two areas and on 3/23/2005 DTSC issued "Acknowledgement of

**Table 3: Sites on Regulatory Agency Databases within One Mile of the Project Area
Fremont Warm Springs Community Plan Area, Fremont, California**

Source: EDR, 2013.

Notes: [shaded] = Map ID cells shaded grey are located within the Project area.

- [dash] = no status information available in environmental Database report.

See Figure 2 for site locations.

See Appendix B for complete environmental database report.

AST = Aboveground Storage Tank. A listing of aboveground petroleum storage tank facilities.

CDL = Clandestine Drug Labs. A listing of clandestine drug lab locations.

CHMIRS = California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

CORRACTS = Corrective Action Report. CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

DTSC = The Department of Toxic Substances Control's (DTSC) Site Mitigation and Brownfields Reuse Program's EnviroStor database identifies sites that have known contamination or sites for which there

ENF = Enforcement Action Listing. A listing of Regional Water Board Enforcement Actions.

ERNS = Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

HAZNET = Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC.

HIST CORTESE = Hazardous Waste & Substance Site List. This listing is no longer updated by the state agency.

HIST UST = Historical Underground Storage Tank. A historical listing of UST sites.

HMIRS = Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to the Department of Transportation.

HWP = EnviroStor Permitted Facilities Listing. Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

HWT = Registered Hazardous Waste Transporter. A listing of hazardous waste transporters.

LQG = RCRA - Large Quantity Generators. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

LUST = Leaking Underground Storage Tank. LUST records contain an inventory of reported leaking underground storage tank incidents.

NFRAP = CERCLIS No Further Remedial Action Planned. Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means RCRA = Resource Conservation and Recovery Act.

RCRA-NONGEN = RCRA - Non Generators. Non-Generators do not presently generate hazardous waste.

SLIC = Spills, Leaks, Investigations and Cleanup. The SLIC program is designed to protect and restore water quality from spills, leaks, and similar discharges.

SQG = RCRA - Small Quantity Generators. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

TRIS = Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

TSCA = Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list.

TSDF = RCRA - Treatment, Storage and Disposal. The database includes selective information on sites which treat, store, or dispose of hazardous waste.

UST = Underground Storage Tank. A listing of active underground petroleum storage tank facilities.

VCP = Voluntary Cleanup Program. Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

µg/L = micrograms per liter.

Regional Water Board = Regional Water Quality Control Board.

TPH-d = total petroleum hydrocarbons as diesel.

TPH-g = total petroleum hydrocarbons as gasoline.

MTBE = 1,1,1-trimethyl-2,2,2-butene.

BTEX = benzene, toluene, ethylbenzene, xylene.

VOC = volatile organic compounds.

SVOC = semi-volatile organic compounds.

ESL = Environmental Screening Level. ESLs were developed by the DTSC and provide conservative screening levels for over 100 chemicals commonly found at sites with contaminated soil and groundwater. They are intended to help expedite the identification and evaluation of potential environmental concerns at contaminated sites.

**Table 3: Sites on Regulatory Agency Databases within One Mile of the Project Area
Fremont Warm Springs Community Plan Area, Fremont, California**

Low Threat Policy criteria = On May 1, 2012, the State Water Board adopted a Low-Threat Underground Storage Tank Case Closure Policy (State Water Board Resolution No. 2012-0016). The Policy applies to petroleum UST sites subject to Chapter 6.7 of the Health and Safety Code. The Policy establishes both general and media-specific criteria. If both the general and applicable media-specific criteria are satisfied, then the leaking UST case is generally considered to present a low threat to human health, safety and the environment.

**TABLE 4: Current Land Uses Associated with Hazardous Materials Uses Identified During the Site Reconnaissance

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Baseline Environmental Cons. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List

EXECUTIVE SUMMARY

(NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there is 1 CERC-NFRAP site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
NEW UNITED MOTOR MANUFACTURING	45500 FREMONT BLVD	40	474

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 CORRACTS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
NEW UNITED MOTOR MANUFACTURING	45500 FREMONT BLVD	40	474

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-TSDF sites within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 29 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 77 RCRA-SQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 12 RCRA NonGen / NLR sites within the searched area.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/23/2011 has revealed that there are 113 FINDS sites within the searched area.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there is 1 2020 COR ACTION site within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 11/15/2012 has revealed that there is 1 US AIRS site within the searched area.

EXECUTIVE SUMMARY

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2011 has revealed that there are 215 CA HAZNET sites within the searched area.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 03/13/2013 has revealed that there are 29 CA ENVIROSTOR sites within the searched area.

EDR PROPRIETARY RECORDS

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 44 EDR US Hist Auto Stat sites within the searched area.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 12 EDR US

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Design Flow: 0
 Baseline Flow: 0
 Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	05/01/1990
Comments:	THE EXXON RS#7-7141 SITE IS A GASOLINE STATION. IN EARLY 1988, THE SITE WAS DISCOVERED TO HAVE SOME GROUNDWATER CONTAMINATION RESULTING FROM A LEAKING UNDERGROUND STORAGE TANK. GROUNDWATER SAMPLING REVEALED THE PRESENCE OF BENZENE (.002-3.0 PPM), TOLUENE (.002- 1.1 PPM), ETHYLBENZENE (.0005 PPM), XYLENE (.002-3.0 PPM), AND TOTAL PETRO- LEUM HYDROCARBONS (21 PPM). IN MARCH 1990, A GROUNDWATER REMEDIATION SYSTEM WAS INSTALLED ON-SITE WITH DIRECT OVER- SIGHT BY THE ALAMEDA COUNTY WATER DISTRICT (ACWD) UNDER RWQCB AUTHORIZATION. SITE SCREENING DONE ACWD IS ACTING AS LEAD AGENCY AND CONTINUES TO MONITOR GROUNDWATER REMEDIATION ACTIVITIES. DHS RECOMMENDS LOW PRIORITY PRELIMINARY ENDANGERMENT ASSESSMENT.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
- Waste code: D004
 Waste name: ARSENIC
- Waste code: D006
 Waste name: CADMIUM
- Waste code: D007
 Waste name: CHROMIUM
- Waste code: D008
 Waste name: LEAD
- Waste code: D035

Amount (Lbs):	35
Waste code:	D035
Waste name:	METHYL ETHYL KETONE
Amount (Lbs):	20
Waste code:	F003
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs):	436362.2
Waste code:	F005
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs):	20
Waste code:	F007
Waste name:	SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS
Amount (Lbs):	5

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Waste code: D003
- Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110002918380

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

CA WDS:

Facility ID: San Francisco Bay 011005795
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel

POTW: Not reported

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: 181
 Waste name: 181

Waste code: 551
 Waste name: 551

Waste code: D001
 Waste name:

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
 Waste name: BARIUM

Waste code: D011
 Waste name: SILVER

Waste code: F001
 Waste name:

THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

 Lead Agency: ALAMEDA COUNTY WATER DISTRICT
 Case Worker: SZ
 Local Agency: ALAMEDA COUNTY WATER DISTRICT
 RB Case Number: 01-2549
 LOC Case Number: 0634
 File Location: Local Agency
 Potential Media Affect: Aquifer used for drinking water supply, Soil
 Potential Contaminants of Concern: Diesel, Gasoline
 Site History:

The site is an approximately 12 acre portion of a property formerly owned by Western Precooling Systems (WPS). The area of concern was occupied by PSB Trucking, Glacier Ice Company, a forklift repair building, a WPS maintenance facility, and an Auto Mall RV storage facility. The property has since been redeveloped into a Home Depot and associated parking lot. In 1987, three USTs were reportedly removed from the southern boundary of the property, across from the PSB trucking building and forklift repair building. In November 1999, one 1,000-gallon gasoline UST and one 550-gallon waste oil UST were removed from the site, south of the former PSB trucking and forklift repair buildings. In order to address the high levels of petroleum and BTEX discovered in groundwater during the February 2000 Subsurface Investigation, an Oxygen Release Compound (ORC) was used to enhance biodegradation. 32 pounds of ORC per boring was injected into 56 boreholes advanced in a 60 by 70 foot area in the vicinity of borings GMX-22 through GMX-25. The ORC injection took place on April 17 and 18, 2000. Due to the schedule of site development, confirmation samples were not collected. In July 2000, two of the former UST pits were re-excavated to remove gravel backfill and any residual contamination present. Although the identity of the former USTs is not documented, the re-excavation is believed to have been of the gasoline and waste oil tanks, which were removed in 1999. 10,000 gallons of visibly contaminated water was pumped out of the excavation pit and allowed to recharge. The next day, another 10,000 gallons of water was removed. The water appeared to be clean, although no laboratory analysis of the water took place due to the site redevelopment schedule. The pits were filled with cement. In addition, as part of the site grading during the redevelopment process, over 20,000 cubic yards of shallow soil from around the site was removed, which includes the residual hydrocarbons and metals in the shallow soil.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Historical Generators:

Date form received by agency: 03/04/2005
 Facility name: THERMO FISHER SCIENTIFIC
 Site name: MICROGENICS CORP
 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
 Waste name: MERCURY

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

CA WDS:

Facility ID: San Francisco Bay 011009650
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

CA WDS:

Facility ID: San Francisco Bay 011010788
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
 Waste name: CHROMIUM

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
 Waste name: LEAD

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: 122
 Waste name: 122

Waste code: 141
 Waste name: 141

Waste code: 181
 Waste name: 181

Waste code: 792
 Waste name: 792

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
 Waste name: CHROMIUM

Waste code: F006
 Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F008
 Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Latitude: 37.501988
 Longitude: -121.9521589
 Case Type: LUST Cleanup Site
 Status: Open - Site Assessment
 Status Date: 07/09/1992
 Lead Agency: ALAMEDA COUNTY WATER DISTRICT
 Case Worker: MH
 Local Agency: ALAMEDA COUNTY WATER DISTRICT
 RB Case Number: 01-2197
 LOC Case Number: 0329
 File Location: Not reported
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Not reported

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

CA WDS:

Facility ID: San Francisco Bay 011013003
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 2
 Facility Telephone: 5106578771
 Facility Contact: MITCHELL A HOPPE
 Agency Name: MITCHELL A HOPPE
 Agency Address: 44533 S Grimmer Blvd
 Agency City,St,Zip: Fremont 945386309
 Agency Contact: MITCHELL A HOPPE
 Agency Telephone: 5106578771
 Agency Type: Private
 SIC Code: 0
 SIC Code 2: Not reported
 Primary Waste: Not reported
 Primary Waste Type: Not reported
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Waste name: 461

Waste code: 512
 Waste name: 512

Waste code: 513
 Waste name: 513

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D035
 Waste name: METHYL ETHYL KETONE

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110012233957

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D011
 Waste name: SILVER

Hazardous Waste Summary:

Waste code: D000
 Waste name: Not Defined

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CA WDS:

Facility ID: San Francisco Bay 011016833
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
 Waste name: CHROMIUM

Waste code: D035
 Waste name: METHYL ETHYL KETONE

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

QUICKSIL, INC. (Continued)

1001126665

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D018
 Waste name: BENZENE

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001
 Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
 Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075
 Waste name: NICOTINE, & SALTS

Waste code: P081
 Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Historical Generators:

Date form received by agency: 09/13/2007
 Facility name: LAM RESEARCH
 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:

Facility ID: San Francisco Bay 011015548
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 2

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F007
 Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F009
 Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No

Violation Status: No violations found

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D038
 Waste name: PYRIDINE

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

CA WDS:

Facility ID: San Francisco Bay 011016268
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 2
 Facility Telephone: 5109799968
 Facility Contact: PJ SAHOTA
 Agency Name: GLC COMMUNICATION
 Agency Address: 47531 Warm Springs Blvd
 Agency City,St,Zip: Fremont 945397464

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 131332.2

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/01/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: N/A
Date Made Active in Reports: 03/13/2013	Last EDR Contact: 04/10/2013
Number of Days to Update: 12	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/04/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810
Date Made Active in Reports: 03/13/2013	Last EDR Contact: 04/05/2013
Number of Days to Update: 12	Next Scheduled EDR Contact: 06/10/2013
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/05/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810

Number of Days to Update: 12	Next Scheduled EDR Contact: 03/11/2013
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 08/18/2011	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 09/08/2011	Telephone: 303-231-5959
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 03/06/2013
Number of Days to Update: 21	Next Scheduled EDR Contact: 06/17/2013
	Data Release Frequency: Semi-Annually

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 09/01/2011	Telephone: 202-566-0250
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 02/26/2013
Number of Days to Update: 131	Next Scheduled EDR Contact: 06/10/2013
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2006	Source: EPA
Date Data Arrived at EDR: 09/29/2010	Telephone: 202-260-5521
Date Made Active in Reports: 12/02/2010	Last EDR Contact: 03/28/2013
Number of Days to Update: 64	Next Scheduled EDR Contact: 07/08/2013
	Data Release Frequency: Every 4 Years

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 02/25/2013
Number of Days to Update: 25	Next Scheduled EDR Contact: 06/10/2013
	Data Release Frequency: Quarterly

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 02/25/2013
Number of Days to Update: 25	Next Scheduled EDR Contact: 06/10/2013
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 12/10/2010	Telephone: 202-564-4203

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/20/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/10/2011	Telephone: 202-564-5088
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 04/15/2013
Number of Days to Update: 61	Next Scheduled EDR Contact: 07/29/2013
	Data Release Frequency: Quarterly

PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 11/01/2010	Source: EPA
Date Data Arrived at EDR: 11/10/2010	Telephone: 202-566-0500
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 04/19/2013
Number of Days to Update: 98	Next Scheduled EDR Contact: 07/29/2013
	Data Release Frequency: Annually

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 06/21/2011	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 07/15/2011	Telephone: 301-415-7169
Date Made Active in Reports: 09/13/2011	Last EDR Contact: 03/11/2013
Number of Days to Update: 60	Next Scheduled EDR Contact: 06/24/2013
	Data Release Frequency: Quarterly

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/08/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/09/2013	Telephone: 202-343-9775
Date Made Active in Reports: 04/12/2013	Last EDR Contact: 04/11/2013
Number of Days to Update: 93	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

	Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/11/2013	Source: Department of Toxic Substances Control

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

APPENDIX C
QUALIFICATIONS OF PREPARERS

Bruce Abelli-Amen, P.G., C.Hg.

Principal Certified Hydrogeologist

M.S., Environmental Systems, Applied Geology, Humboldt State University, 1988
B.S., Geological Sciences, UC Santa Barbara
40-hour OSHA training, 1985
Certified Hydrogeologist No. 96, 1995
Professional Geologist No. 5593, 1993
23 years of experience

Recent Projects

- New Irvington Tunnel EIR, Hetch Hetchy Water Conveyance System, SFPUC, CEQA Project Manager
- Teichert Aggregate Mining EIR, Yolo County, Project Manager
- Downtown Ferry Terminal Expansion Project EIR, Technical Lead on Hydrology and Water Quality and Hazardous Materials
- Apple Campus EIR, Cupertino, Project Manager for Geology, Hazards, and Hydrology EIR sections
- Redwood City General Plan Update EIR, Project Manager for Hydrology and Water Quality, Geology and Soils, and Hazardous Materials
- Hunter Subdivision EIR, St. Helena, Project Manager for Hydrology and Water Quality, Geology and Soils, and Hazardous Materials, Air Quality, and Noise.

Bruce Abelli-Amen is a Principal, Certified Hydrogeologist, and a CEQA project manager. He has experience in all phases of CEQA and NEPA projects, including managing large multi-disciplinary teams of specialists in the preparation of Expanded Initial Studies, Mitigated Negative Declarations, and Environmental Impact Reports and Statements. He has managed CEQA projects for landfill decommissioning, new wastewater treatment plants, mining projects, mixed-use developments, and major water transmission infrastructure projects.

Mr. Abelli-Amen not only manages CEQA projects, but also specializes in conducting technical analyses for particularly challenging projects. His expertise in geology, soils and seismicity, hydrology and water quality, NPDES permitting, and hazardous materials, has provided clients with thorough and legally defensible analyses for complex projects. He has conducted hydrology and water quality impact analyses for a variety of projects, including General Plans, Specific Plans, commercial campus projects, and industrial, residential, transportation, and agricultural uses.

He also has experience with construction management and permitting, which provides useful insights into the development of feasible and practical mitigation measures for identified significant CEQA impacts. He is currently managing the consultant contract for the construction management and permit compliance requirements for the 34th America's Cup waterfront improvements. In addition, he is the technical lead and project manager for the SFPUC's New Irvington Tunnel Groundwater Management Program

What Our Clients Say:

I have to hand it to Bruce and his staff; this is the best piece of work I have seen in a very long time! Well written, articulate, authoritative, detailed, accurate, and he delivered it to us on-time and 99% complete. Nice work!!!! Bruce I am very impressed.

Heidi Tschudin, Contract Planner for Yolo County Planning referring to a BASELINE CEQA document on a proposed gravel mining project in Yolo County. November 2011

MONIKA KRUPA

Environmental Scientist I

M.S., Soils and Biogeochemistry, University of California, Davis

B.A., Environmental Sciences, Biological Emphasis, University of California, Berkeley

40-hour OSHA training

4 years of experience

Recent Projects

- New Irvington Tunnel Project, data management, 2012 to Present.
- Westside Basin Groundwater Supply Monitoring Program, field data management and groundwater sampling, 2012 to Present.
- Foster City Civic Center EIR, Hydrology and Water Quality Section, Hazards and Hazardous Materials Section, 2012 to present.
- Gilead Sciences Corporate Campus Master Plan EIR, Hydrology and Water Quality Section, 2012.
- California Maritime Academy Security Building Project IS/MND, Hydrology and Water Quality Section, 2012.
- Environmental Inspector for construction along San Francisco waterfront for Port of San Francisco, Oct 2012 to Jan 2013.
- Evans Avenue and Rankin Street, San Francisco, Phase I Environmental Site Assessment, 2012.

Monika Krupa is an environmental scientist. She has prepared the hydrology and water quality sections of numerous Initial Studies and EIRs and has reviewed the compliance strategies developed by other firms for projects subject to Municipal Regional Permit requirements. She is also experienced in carrying out Phase I environmental site assessments in accordance with standard industry practice and current ASTM standards and EPA All Appropriate Inquiry regulations for Phase I reports.

Ms. Krupa has participated in numerous hazardous materials investigations and remediation projects. Her field experience includes groundwater level monitoring, soil and groundwater sampling, supervising the testing of soil vapor extraction systems, carrying out groundwater aquifer testing, and supervising the installation and destruction of groundwater monitoring wells. She has worked at a variety of hazardous materials sites impacted with lead, asbestos, petroleum hydrocarbons, and chlorinated solvents, including: service stations, landfills, railroads alignments, petroleum refineries, and power plants

Aspects of her work included completing monitoring reports and sensitive receptor surveys, planning groundwater aquifer testing and monitoring activities, obtaining permits, developing soil and groundwater remediation work plans, database management, and statistical analysis of environmental data.

Ms. Krupa also has experience as a soil and water quality researcher at UC Davis. Her projects were designed to monitor the soil and surface water quality impacts of agricultural irrigation practices and silvicultural land management practices, and were carried out within the Glenn-Colusa Irrigation District jurisdiction and Lassen National Forest. This work involved designing surface water quality monitoring plans, collecting water samples and field discharge measurements, performing sample analysis, compiling and managing multiple databases, statistical analysis and modeling, and reporting.
