ASPIRE CONSULTING LLC.

Aspire Consulting LLC empowers communities to refine its programs and housing crisis response system to be housing-focused, oriented to outcomes, effective, efficient, and well-coordinated. d. Aspire Consulting LLC also has many years of experience in Point-in-Time Counts, Homeless Management Information Systems, Homeless and Caring Court, and 100 Day Challenge performance

APPLIED SURVEY RESEARCH

Applied Survey Research (ASR) is a social research firm dedicated to helping people build better communities by collecting meaningful data, facilitating information-based planning, and developing custom strategies. The firm is nationally recognized leader in Point-in-Time homeless count technical assistance.

Project Lead: Julie Burr

Senior Data Analyst: Javier Salcedo, Kevin Click

Graphic Design and Layout: Jenna Webber and Emily Eder

Department Vice President: Peter Connery

EVERYONE HOME

EveryOne Home is leading a collaborative effort to end homelessness in Alameda County. They engage and collaborate with stakeholders well beyond the homeless and housing service delivery system—city and county government, business community, faith community, non-profits, and, most importantly, those who have themselves experienced the trauma of homelessness.

EveryOne Home Staff

Director of Research and Data Analytics: Katie Haverly

Director of Policy and Homelessness Strategies: Quintin Mecke

Operations Manager: Dorcas Chang

Systems Planning Coordinator: Katie Barnett

ACKNOWLEDGMENTS

The considerable talents and efforts of many individuals helped ensure the success of this endeavor. EveryOne Counts! 2022 PIT Planning Committee would like to thank the many service providers who facilitated the Point-in-Time (PIT) count in the midst of the COVID-19 pandemic. Special thanks to the jurisdictional staff throughout the count as well as homeless services program and outreach staff in particular whose efforts this year were especially helpful and challenging. Recruiting count workers, assisting in the administration of surveys, and opening the doors of their facilities to host training sessions, coordinating count teams, and distributing surveys after the PIT count was a tremendous accomplishment. Special thanks to the work of Laurie Flores the Homeless Services Manager for the City of Fremont whose extra efforts and dedication is especially notable and Suzanne Shenfil the Human Services Director for the City of Fremont as well.

INTRODUCTION

As required by the U.S. Department of Housing and Urban Development (HUD) of all receiving federal funding to provide homeless services, Continuums of Care (CoC) across the country report the findings of their local Point-in-Time count in their annual funding application to HUD.

Significantly, the Alameda County Point-in-Time (PIT) Census and Survey in 2022 was conducted during the COVID-19 pandemic and is the only full sheltered and unsheltered count since 2019. The 2021 unsheltered PIT was initially postponed to the end of January 2022 due to COVID-19 safety concerns and then again to February 2022 due to the January 2022 COVID-19 Omicron surge. Coordination with representatives from jurisdictions like Fremont throughout the County is critical to a successful PIT count. The city of Fremont is especially interested in the specific prevalence and characteristics of persons experiencing homelessness in its city to better inform their local response. Fremont has commissioned a dedicated report highlighting the uniqueness of homeless in the City of Fremont.

PROJECT GOALS

In order for the Homeless Census and Survey to best reflect the experience and expertise of the community, the EveryOne Counts! 2022 PIT Count Planning Committee held planning meetings with various local stakeholders including representatives from the City of Fremont. The EveryOne Counts! 2022 PIT Count Planning Committee developed the following project goals to guide the planning and implementation:

- 1. Conduct a HUD compliant, safe and accurate count following COVID-19 public health guidelines
- 2. Center racial equity (administration, survey questions, and analyses) and policy-informing data
- 3. Coordinate outreach efforts and PIT count route planning consistently across every census tract
- 4. Innovate data collection tools for accuracy and virtual route planning and deployment
- 5. Ensure accurate City data consistent with the quality of previous counts
- 6. Better understand the opinions, needs, history, and profile of people who are homeless
- 7. Expedite production of reports and data availability
- 8. Increase public awareness of overall homeless issues and generate support for constructive solutions

FEDERAL DEFINITION OF HOMELESSNESS FOR POINT-IN-TIME COUNTS*

In this study, the HUD definition of homelessness for the Point-in-Time Count was used. This definition includes individuals and families:

- Living in a supervised publicly or privately operated shelter designated to provide temporary living arrangements; or
- With a primary nighttime residence that is a public or private place not designed for or ordinarily used as
 a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or
 train station, airport, or camping ground.

*It should be noted that the broader definition of homelessness defined by the McKinney-Vento Act and used by K-12 school districts includes persons and families living in "double-up" situations as well as hotels and motels. However, this definition can not be used for purposes of this report per HUD's PIT Count Guidelines.

POINT-IN-TIME CENSUS

The 2022 Alameda County Point-in-Time Homeless Census represents a complete enumeration of all sheltered and unsheltered persons experiencing homelessness in the City of Fremont. It consisted of three primary components:

- General Street Count: An early morning count of unsheltered homeless individuals and families on
 February 23, 2022. This included those sleeping outdoors on the street; at bus and train stations; in parks,
 tents, and makeshift shelters; and in vehicles and abandoned properties.
- **General Shelter Count:** A nighttime count of homeless individuals and families staying at publicly and privately-operated shelters on February 22, 2022. This included those who occupied emergency shelters, transitional housing, and safe havens.
- Homeless Survey: An in-person interview of sheltered and unsheltered individuals conducted by outreach surveyors in the weeks following the general street count. Data from the survey were used to refine the Point-in-Time Census estimates.

It is important to note that targeted County Office of Education (COE) Street Count of K-12 Students and their Families as part of the PIT count in 2022 was limited compared to prior counts due to COVID-19 related staffing issues at school districts as well as the Family Resource Centers.

For more information regarding the research methodology, please see Appendix A: Methodology.

CITY OF FREMONT

2022 HOMELESS POINT-IN-TIME COUNT & SURVEY

Every two years communities across the country conduct comprehensive counts of people experiencing homelessness in order to measure the prevalence and characteristics of homelessness. The 2022 Alameda County EveryOne Home Point-in-Time Count which included a detailed assessment of the city of Fremont, was a community-wide effort conducted on February 23rd, 2022. In the weeks following the street count, a survey was administered in the city of Fremont to 133 unsheltered and sheltered homeless persons in order to better understand their experiences and help assess their needs.

<u>POINT-IN-TIME COUNT – KEY DATA</u> FINDINGS

The EveryOne Counts! 2022 Homeless Census and Survey included a complete enumeration of all unsheltered and publicly or privately sheltered homeless persons. The general street count was conducted on February 23, 2022 from approximately 5:00 a.m. to 10:00 a.m. and covered all of Alameda County including the City of Fremont. The shelter count was conducted on the previous evening and included all individuals staying in emergency shelters, transitional housing facilities, and domestic violence shelters. The general street count and shelter count methodology were similar to those used in 2019, but some modifications were made to maximize safe participation in response to the COVID-19 pandemic.

The methodology used for the EveryOne Counts! 2022 Homeless Census and Survey is commonly described as a "blitz count" since it is conducted by a large team over a very short period of time. As this method was conducted in the City of Fremont, the result was an observation-based count of individuals and families who appeared to be homeless and is , therefore, based on the subjective assessment of the trained enumerators and outreach staff.

The occupancy of homeless shelters in Fremont was collected for the night of February 22, 2022. All shelter data were gathered either directly from the shelter or from Alameda County's Homeless Management Information System.

The count was followed by an in-person representative survey, the results of which were used to profile and estimate the condition and characteristics of the local homeless population. Information collected from the survey is used to fulfill HUD reporting requirements and inform local service delivery and strategic planning efforts.

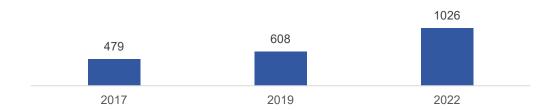

NUMBER AND CHARACTERISTICS OF HOMELESS PERSONS IN THE CITY OF FREMONT

Total Population and Trend Data

A total of 1,026 individuals experiencing homelessness were counted on February 23, 2022, an increase of 418 individuals (69%) from 2019. It is beyond the scope of the PIT count effort to speculate on the causal factors that led to this increase.

Figure 1

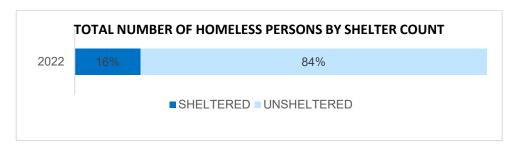

Shelter Status

While the number of individuals served by Fremont shelters increased (30%) between 2019 and 2022, there was also an increase of 381 unsheltered individuals (79%). In 2022, 84% of the people experiencing homelessness in Fremont were unsheltered.

Figure 2

Year	2017	2019	2022
Unsheltered	282	485	866
Sheltered	197	123	160
Total	479	608	1,026

Sixteen percent (16%) of the population were residing in homeless shelters. An additional 17% were residing in tents and 11% were identified sleeping on the streets and other outdoor locations. Twenty-five percent (25%) were sleeping in their RV, 30% were identified in their car or van and 1% were residing in abandoned buildings.

<u>Characteristics of Homelessness in Fremont – Survey Results</u>

Age was a component of the street and shelter census as well as the survey effort. The unsheltered age reporting to HUD is in the following categories only – under 18, 18-24 and 25 and over. Survey age is captured from the sample of the overall population and is considered to be more accurate than visual assessments of age done during the census. Surveys, however, are not administered to children (u18) and therefore age distribution shown below is considered to be representative (randomized) for the adult population of persons experiencing homelessness only.

APPENDIX A: METHODOLOGY

OVERVIEW

The Alameda County Point-in-Time Homeless Census and Survey was designed and implemented through a collaborative CoC-wide effort that included County, city, and community-based organizations. COVID-19 related safety and public health issues were a key issue and concern in planning from both a process and staffing perspective as we prioritized caution with the need to be accurate and consistent with the outreach success we have had in previous PIT efforts.

The 2022 Alameda County Homeless Census and Survey was performed using HUD-recommended practices and using HUD's PIT Count definition of homelessness. The goal was to produce a point-in-time estimate of individuals and families experiencing homelessness in the City of Fremont, a region which covers approximately 88 square miles. Several primary data collection components were integrated to produce the total estimated number of persons experiencing homelessness on a given night. A detailed description of these components follows.

COMPONENTS OF THE HOMELESS SURVEY

The methodology used in the 2022 Point-in-Time Census and Survey had three major components:

- 1. General Street Count: A morning count of unsheltered homeless individuals and families on February 23, 2022. This occurred from approximately 5:00 AM to 10:00 AM and included those sleeping outdoors on the street; at transit stations; in parks, tents, and other makeshift shelters; and in vehicles and abandoned or public properties, like parking garages and related locations. The general street count was designed to take place before shelter occupants were released. In areas with shelters, the immediate area surrounding the shelter was prioritized to eliminate potential double counting of individuals.
- 2. **General Shelter Count:** A nighttime count of homeless individuals and families staying at publicly and privately operated shelters on February 22, 2022. This included those who occupied emergency shelters, transitional housing, and safe havens.
- 3. **Homeless Survey:** An in-person countywide interview with 1,517 unique sheltered and unsheltered homeless individuals conducted by peer surveyors between February 24 and April 8, 2022. In the City of Fremont 133 surveys were conducted. Data from the survey were used to refine the Point-in-Time Census estimates, and then used to gain a more comprehensive understanding of the demographics and experiences of homeless individuals.

THE PLANNING PROCESS

To ensure the success and integrity of the count, many county and community agencies collaborated on community outreach, volunteer recruitment, logistical plans, methodological decisions, and interagency coordination efforts. ASR provided technical assistance for these aspects of the planning process. ASR has over 22 years of experience conducting homeless counts and surveys throughout California and across the nation. Their work is featured as a best practice in the HUD publication, *A Guide to Counting Unsheltered Homeless People*.

COMMUNITY INVOLVEMENT

Local homeless and housing service providers and advocates were valued partners in the planning and implementation of this count. Due to COVID_19 and the public health risks, the organizing team made the decision, supported by the County Public Health office, to limit participation levels in the count by the public and by persons currently experiencing homelessness out of COVID-19 transmission concerns. As a result of significant expansion of outreach services by jurisdictional and local community organizations, the organizing team felt that appropriate, safe and thorough outreach could be achieved by using outreach staff as the primary enumerators in the field. Some lived experience persons could be integrated by outreach staff as in previous PIT count efforts, but this would be selective and subject to compliance with public health requirements.

Overall, hundreds of individuals and dozens of county, city, and community-based organizations participated in planning and pre-count coordination, generously offering their time and energy to ensuing an accurate count. Ultimately, 195 count teams consisting of over 480 count workers, including 71 paid lived-experience guides, conducted the visual PIT count throughout the county and a subset of this group was allocated for the City of Fremont. Additionally, for the unsheltered survey component, two survey coordinators from agencies facilitated the unsheltered survey coordination for 6 lived-experience surveyors.

STREET COUNT METHODOLOGY

DEFINITION

For the purposes of this study, the HUD definition of unsheltered homeless persons was used: An individual or family with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train stations, airport, or camping ground.

METHODOLOGICAL IMPROVMENTS

The 2022 street count methodology followed an established, HUD approved approach commonly called a blitz method followed by a sample survey. Very significantly, a change was made in the use of GPS enabled smartphones in data collection using an ESRI *Survey 123* application developed and customized by ASR to conform to HUD data collection requirements. This app was also used as a tool to verify compliance with the COVID-19 safety precautions established by the planning team. Also, improvements were made in pre-planning efforts to deploy count teams virtually, wherever possible, thereby avoiding the need for centralized deployment centers where COVID-19 transmission risks would be greater.

Outreach organizations, program staff, county, and city staff along with selected community members were able to select areas for enumeration from an interactive GIS planning map tool that enabled planning for complete coverage of the County with prioritization of high-density homeless routes to outreach staff and personnel with direct service experience.

VOLUNTEER AND GUIDE RECRUITMENT

As noted above, there was a planned effort to reduce the number of persons directly involved in field work and outreach in the 2022 PIT count due to COVID-19 safety concerns. In 2022, over 480 outreach workers, community

volunteers and homeless guides participated in the general street count throughout the county including the City of Fremont.

Outreach and program staff did limited recruitment of persons with lived experience to act as guides, and in some cases embedded reporters, in order to conduct the count in 2022. Homeless guides were paid \$20 for online training as well as \$20 per hour worked on the days of the count. Staff and clients from Downtown Streets Team were integral to the outreach efforts during both the census and survey components of the study.

In order to participate in the count, all volunteers and guides were requested to view a 20-minute training video before the count. Additionally, targeted virtual trainings were held for multiple groups throughout the county who were able to convene attendees. Training covered all aspects of the count including:

- definition of homelessness,
- how to identify homeless individuals,
- how to safely and respectfully conduct the count,
- how to use the smart phone app and also access the smartphone app training video,
- how to use the route maps to ensure the entirety of the assigned area was covered,
- tips to identify vehicles, and
- other tips to help ensure an accurate and safe count.

SAFETY PRECAUTIONS

Safety for both enumerators and those being surveyed was a top priority for the count. Every effort was made to minimize potentially hazardous situations. Law enforcement agencies were notified of pending street count activity in their jurisdictions. In census tracts with a high concentration of homeless encampments, specialized teams with knowledge of those encampments were identified and assigned to those areas along with the utilization of lived-experience embedded reporters. Enumeration teams were advised to take every safety precaution possible, including bringing flashlights and maintaining a respectful distance from those they were counting.

In 2022, COVID-19 safety precautions were especially important. Eligibility to participate in the count was limited to persons who were vaccinated. Proof of vaccination, however, was not a requirement. The planning committee deferred to local county, city, and organizational staff for I COVID-19 compliance and engagement

LOGISTICS AND ENUMERATION

On the morning of the street count, teams of two or more persons deployed to enumerate designated areas of the county for the street count. Each team was composed of any combination of outreach workers, lived experience guides, program staff and service experienced community volunteers. Each team had a lead and prior to the count were provided with their assigned census tract maps, smart phone access information and training, field observation tips and guidelines, including vehicle identification criteria. Teams were all assigned a unique team number and were instructed to text a central PIT count dispatch center to confirm they were enroute and on task for enumeration of their route assignment.

All accessible streets, roads, parks, and highways in the enumerated tracts were traversed by foot or car. The Alameda County *Survey 123* smartphone app was used to record the number of homeless persons observed in addition to basic demographic and location information. Dispatch center volunteers also verified that at least one

person on each team had a cell phone available for their use during the count and recorded the number on the volunteer deployment assignment sheet. Teams were asked to cover the entirety of their assigned areas.

COUNTY OFFICE OF EDUCATION COUNT

For the first year in several PIT counts the project team was unable to conduct a telephone count of children and families experiencing homelessness as registered through the McKinney Vento program in their local school district. This is a significant effort and could not be accomplished due to COVID-19 staffing impacts in the school districts and insufficient personnel. This is a significant missing element of the 2022 PIT count.

SHELTER COUNT METHODOLOGY

GOAL

The goal of the shelter and institution count is to gain an accurate count of persons temporarily housed in shelters and other institutions across the county. These data are vital to gaining an accurate, overall count of the homeless population and understanding where homeless persons receive shelter.

DEFINITION

For the purposes of this study, the HUD definition of sheltered homelessness for PIT Counts was used. This definition includes individuals and families living in a supervised publicly or privately operated shelter designated to provide temporary living arrangement such as emergency or transitional shelters or Safe Haven facilities.

RESEARCH DESIGN

All shelter data were gathered either directly from the shelter or from the county's Homeless Management Information System and only programs listed on the Housing Inventory Chart (HIC) were used.

DATA COLLECTION

To collect data on individuals staying in shelters, the county HMIS staff and Aspire Consulting worked closely with shelter staff throughout the City of Fremont and collected data on all emergency shelters, transitional housing programs, and Safe Havens operating in the city. Data was collected on household status, age, gender, race and ethnicity, veteran status, chronic status, and if individuals had certain health conditions.

CHALLENGES

There are many challenges in any homeless enumeration, especially when implemented in a community such as the City of Fremont. Point-in-Time Counts are "snapshots" that quantify the size of the homeless population at a given point during the year. Hence, the count may not be representative of fluctuations and compositional changes in the homeless population seasonally or over time.

The COVID-19 pandemic was an especially challenging issue faced by the PIT count planning committee for a number of reasons, not the least of which was the Omicron variant surge that peaked in the last two weeks of

January 2022. The inability to better integrate more persons with lived experience as route guides was a challenge though mitigated by an increased use of outreach staff and the participation of Fremont's Downtown Streets Team staff and clients.

The methods employed in a non-intrusive visual homeless enumeration, while academically sound, have inherent biases and shortcomings. Many factors may contribute to potential undercounts. For example: It is difficult to identify homeless persons who may be sleeping in vans, cars, recreational vehicles, abandoned buildings, or structures unfit for human habitation.

Homeless families with children and unaccompanied homeless children and youth often seek opportunities to stay on private property, rather than sleep on the streets, in vehicles, or in makeshift shelters. The limited ability to engage school districts to query their McKinney-Vento families and the Family Resource Centers to outreach to families living in unfit and unstable housing situations had a major impact on the overall count in 2022.

SURVEY METHODOLOGY

PLANNING AND IMPLEMENTAION

The data collected through the survey are used for the McKinney-Vento Continuum of Care Homeless Assistance funding application and are important for future program development and planning. The survey elicited information such as gender, family status, military service, duration and recurrence of homelessness, nighttime accommodations, causes of homelessness, and access to services through open-ended, closed-ended, and multiple response questions. The survey data bring greater perspective to current issues of homelessness and to the provision and delivery of services.

Surveys were conducted primarily by those with current or recent lived experience with homelessness as well as outreach staff workers with lived homeless experience. Training sessions were facilitated by ASR and community partners. Potential interviewers were led through a comprehensive orientation that included project background information as well as detailed instruction on respondent eligibility, interviewing protocol, and confidentiality. Survey workers were compensated at a rate of \$10 per completed survey.

It was determined that survey data would be more easily obtained if an incentive gift was offered to respondents in appreciation for their time and participation. McDonalds gift certificates, and in some cases socks, were provided as an incentive for participating in the 2022 homeless survey. The gift cards and socks were easy to distribute, had broad appeal, and could be provided within the project budget. The incentives proved to be widely accepted among survey respondents.

SURVEY SAMPLING

Based on a PIT Count estimate of 1,026 homeless persons enumerated and profiled in the City of Fremont, with a randomized survey sampling process, the 133 valid surveys represented a confidence interval of +/-7.9% with a 95% confidence level when generalizing the results of the survey to the estimated population of individuals experiencing homelessness in the City of Fremont.

The 2022 survey was administered in shelters, transitional housing facilities, and on the street. To ensure the representation of transitional housing residents, which can be underrepresented in a street-based survey, survey quotas were created to reach individuals and heads of family households living in these programs.

Strategic attempts were also made to reach individuals in various geographic locations and of various subset groups such as homeless children and youth, minority ethnic groups, military veterans, domestic violence survivors, and families. One way to increase the participation of these groups was to recruit peer survey workers which was done primarily by clients of Downtown Streets Team.

In order to increase randomization of sample respondents, survey workers were trained to employ an "every third encounter" survey approach. If the person declined to take the survey, the survey worker could approach the next eligible person they encountered. After completing a survey, the randomized approach was resumed. In more remote cases where respondents were sparser this survey interval was modified.

DATA COLLECTION

Care was taken by interviewers to ensure that respondents felt comfortable regardless of the street or shelter location where the survey occurred. During the interviews, respondents were encouraged to be candid in their responses and were informed that these responses would be framed as general findings, would be kept confidential, and would not be traceable to any single individual.

DATA ANALYSIS

The survey requested respondents' initials and date of birth so that duplication could be avoided without compromising the respondents' anonymity. Upon completion of the survey effort, an extensive verification process was conducted to eliminate duplicates. This process examined respondents' date of birth, initials, gender, ethnicity, length of homelessness, and consistencies in patterns of responses to other survey questions.

SURVEY CHALLENGES AND LIMITATIONS

The 2022 Homeless Survey did not include an equal representation of all homeless experiences. For example, finding families experiencing homelessness presents a challenge and can lead to underrepresentation in the survey results. The same applies to unaccompanied children and youth, though care is taken to ensure that youth surveyors are involved, to increase the response rate of youth survey respondents.

There may be some variance in the data that individuals experiencing homelessness self-reported, however, using a peer-centric interviewing methodology is believed to allow the respondents to be more candid with their answers and may help reduce the uneasiness of revealing personal information. Service providers and county staff also reviewed the surveys to ensure quality responses. Surveys that were considered incomplete or containing false responses were not accepted.
