

Phoenix canariensis
Canary Island Date Palms

Washington Boulevard & Driscoll Road
Irvington District

Approximate location on map.

Photo showing the palms in front of the Gallego Winery before the 1906 earthquake. Photo courtesy of Fremont Museum of Local History.

Photo Taken: February 2011

IRV-3 TREE INFORMATION/June 2012

HEIGHT: NA

QUANTITY: 6

SPREAD: Average 25 ft.

NATIVE TO: Canary Island

DBH: NA

LANDMARK DATE: June 19, 2012

The semicircular formation of Canary Island Date Palms is a remnant of the historical Gallegos Winery. Early photographs dating back to 1906 show that the palms were planted in front of the winery.²³ In 1893, the Gallegos Winery was comprised of about 600 acres and had a cooperage totalling 1,250,000 gallons of 2,058,800 gallons produced in Irvington at the time. Unfortunately the winery was destroyed during the 1906 earthquake and the vineyards faced degradation during the following years. Eventually the lands were sold for housing and road development.³³
